# SCHEME OF TEACHING AND EXAMINATION (160 Credits Scheme)

(Effective from the academic year 2023-2024)

## III Semester

### B.E. in Computer Science & Engineering

**Batch:2022-2023**

Sl. No.	Course and Course Code	Course Title	Teaching / Paper setting Dept.	Teaching hrs./week				Examination				Credits	
				Lecture	Tutorial	Practical/ Drawing	Self-Study Component	Duration in hrs.	CIE Marks	SEE Marks	Total Marks		
				L	T	P	S						
1.	PCC / BSC	S3MATC	Statistics and Probability	Dept. / Maths	3	0	0		3	50	50	100	3
2.	IPCC	S3CCSI01	Operating Systems(I)	Dept.	3	0	2		3	50	50	100	4
3.	IPCC	S3CCSI02	Digital Circuits and Computer Organizations (I)	Dept.	3	0	2		3	50	50	100	4
4.	PCC	S3CCS01	Data Structures and Applications	Dept.	3	0	0		3	50	50	100	3
5.	PCCL	S3CCSL01	Data Structures and Applications Laboratory	Dept.	0	0	2		3	50	50	100	1
6.	ESC		ESC/ETC/PLC	Dept.	2	0	2		3	50	50	100	3
7.	UHV	SHS01	Social Connect and Responsibility ( <b>Board: ME</b> )	Dept.	0	0	2		-	100	-	100	1
8.	AEC/ SEC	Ability Enhancement Course/ Skill Enhancement Course – III	Dept.	If offered as Theory Course				1½	50	50	100	1	
				1	0	0							
				If offered as Integrated Course				1½					
9.	NCMC	SMC01	National Service Scheme (NSS)	NSS CO	0	0	2		100	-	100	0	
		SMC02	Physical Education (PE) (Sports and Athletics)										
		SMC03	Yoga										
		<b>Total</b>								<b>550</b>	<b>350</b>	<b>900</b>	<b>20</b>
	AAP	AICTE Activity Points (Applicable for both Regular and Lateral Entry students)		40 hours community service to be documented and produced for the examination									

**Note:** PCC: Professional Core Course, IPCC: Integrated Professional Core Course, PCCL: Professional Core Course laboratory,

UHV: Universal Human Value Course, NCMC: Non Credit Mandatory Course, AEC: Ability Enhancement Course, SEC: Skill Enhancement Course,

ESC: Engineering Science Course, ETC: Emerging Technology Course, PLC: Programming Language Course

L: Lecture, T: Tutorial, P: Practical S= SDA: Skill Development Activity, CIE: Continuous Internal Evaluation, SEE: Semester End Evaluation.

#### Engineering Science Course (ESC/ETC/PLC) (Offered by the Department)

S3CCSI03	Java Programming	S3CCSI05	Python Programming
S3CCSI04	Web Programming	S3CCSI06	Object Oriented Programming with C++

#### Ability Enhancement Course – III (Offered by the Department)

S3CSA01	Unix and Shell Programming	S3CSA03	Version controller with Git
S3CSA02	MS Office and Latex	S3CSA04	Ethics and Public Policy for AI

**Integrated Professional Core Course (IPCC):** Refers to Professional Core Course Theory Integrated with practical of the same course. Credit for IPCC can be 04 and its Teaching–Learning hours (L : T : P) can be considered as (3 : 0 : 2) or (2 : 2 : 2). The theory part of the IPCC shall be evaluated both by CIE and SEE. The practical part shall be evaluated by only CIE (no SEE). However, questions from the practical part of IPCC shall be included in the SEE question paper. For more details, the regulation governing the Degree of Bachelor of Engineering (B.E.) 2022-23 may please be referred.

**National Service Scheme /Physical Education/Yoga:** All students have to register for any one of the courses namely National Service Scheme (NSS), Physical Education (PE)(Sports and Athletics), and Yoga(YOG) with the concerned coordinator of the course during the first Week of III semesters. Activities shall be carried out between III semester to the VI semester (for 4 semesters). Successful completion of the registered course and requisite CIE score is mandatory for the award of the Degree. The events shall be appropriately scheduled by the colleges and the same shall be reflected in the calendar prepared for the NSS, PE, and Yoga activities. These courses shall not be considered for vertical progression as well as for the calculation of SGPA and CGPA, but completion of the course is mandatory for the award of Degree.

---

**SCHEME OF TEACHING AND EXAMINATION (160 Credits Scheme)**

---

# **Scheme of Teaching, Examination and Syllabus**

## **B.E. COMPUTER SCIENCE & ENGINEERING**

Batch: 2022-23

### **III SEMESTER**

(Effective from the academic year 2023-2024)

**B.E COMPUTER SCIENCE & ENGINEERING**  
**OUTCOME BASED EDUCATION (OBE) AND CHOICE BASED CREDIT SYSTEM (CBCS)**  
**SEMESTER - III**

**STATISTICS AND PROBABILITY**

Course Code	S3MATC	CIE Marks	50
Teaching Hours/Week (L:T:P)	(3:0:0)	SEE Marks	50
Credits	3	Exam Hours	03

**Course objectives:**

1. To develop and conduct appropriate experimentation, analyze and interpret data and use engineering judgment to draw conclusion.
2. To introduce the basic concepts and applications of probability in engineering.
3. To provide the knowledge about the random variable, random process and how to model the random processes in engineering.
4. To deal with multiple random variables and introduction of the most important types of stochastic processes.
5. To investigate the variability in sample statistics from sample to sample, measure of central tendency & dispersion of sample statistics and pattern of variability of sample.

**Module-1 (07 hrs)**

**Statistics:** Introduction, Definitions, Curve Fitting: Straight line, parabola and exponential curves. Correlation and regression, formula for correlation coefficient, regression lines and angle between the regression lines.

**Module-2 (08 hrs)**

**Probability:** Basic terminology, Definition of probability, Probability and set notations, Addition law of probability, independent events, conditional probability, multiplication law of probability, Baye's theorem.

**Module-3 (08 hrs)**

**Random Variable** Discrete Probability distribution, Continuous Probability distribution, expectation, Variance, Binomial distribution, Poisson distribution, Normal distribution and Exponential distributions.

**Module-4 (08 hrs)**

**Joint Probability** Joint probability distribution, Discrete and independent random variables, Expectation, Covariance, Correlation coefficient. Probability vectors, stochastic matrices, fixed point matrices, Regular stochastic matrices, Markov chains, Higher transition-probabilities, stationary distribution of regular Markov chains and absorbing states.

**Module-5 (09 hrs)**

**Sampling Distribution:** Introduction, Objectives, sampling distribution, testing of hypothesis, level of significance, confidence limits, simple sampling of attributes, test of significance of large samples, comparison of large samples, sampling of variables, central limit theorem, confidence limits for unknown mean, test of significance for means of two large samples, Sampling of variables – small samples, Student's t-distribution.

**Course outcomes:**

On successful completion of this course, students will be able to:

1. Apply least square method to fit a curve for the given data and evaluate the correlation coefficient and regression lines for the data (L3).
2. Analyze the nature of the events and hence determine the appropriate probabilities of the events (L3).
3. Classify the random variables to determine the appropriate probability distributions (L2).
4. Determine the joint probability distribution, its mean, variance and covariance. Calculate the transition matrix and fixed probability vector for a given Markov chain (L3).
5. Estimate the parameter of a population, important role of normal distribution as a sampling distribution (L2).

**Question paper pattern:**

- The question paper will have ten full questions carrying equal marks.
- Each full question will be for 20 marks.
- There will be two full questions (with a maximum of four sub- questions) from each module.
- Each full question will have sub- question covering all the topics under a module.
- The students will have to answer five full questions, selecting one full question from each module.

Sl. No.	Title of the Book	Name of the Author/s	Name of the Publisher	Edition and Year
<b>Textbooks</b>				
1	“Higher Engineering Mathematics”	B.S.Grewal	Khanna Publications	43 <sup>rd</sup> edition 2015
2	Higher Engineering Mathematics	Ramana .B.V	Tata-McGraw Hill	latest edition 2016
<b>Reference Books</b>				
1	Advanced Engineering Mathematics	Erwin Kreyszig	Wiley Publications	10 <sup>th</sup> Edition, 2015
2	Advanced Engineering Mathematics	C. Ray Wylie and Louis C. Barrett	Tata-McGraw Hill	6 <sup>th</sup> Edition, 2005
3	Applied Mathematics for Engineers and Physicists	Louis A. Pipes and Lawrence R. Harvill	McGraw Hill	3 <sup>rd</sup> edition 2014

<b>B.E COMPUTER SCIENCE &amp; ENGINEERING</b> <b>OUTCOME BASED EDUCATION (OBE) AND CHOICE BASED CREDIT SYSTEM (CBCS)</b> <b>SEMESTER - III</b>			
<b>OPERATING SYSTEM</b>			
Course Code	S3CCSI01	CIE Marks	50
Teaching Hours/Week (L:T:P)	(3:0:2)	SEE Marks	50
Credits	4	Exam Hours	03
<b>Course objectives:</b>			
<ol style="list-style-type: none"> <li><b>Define</b> fundamental OS abstractions such as processes, threads, files etc, (L1-knowledge).</li> <li><b>Visualize</b> the intricate relationship between an operating system and its underlying hardware (L1-knowledge).</li> <li><b>Explain</b> scheduling algorithms, deadlock detection algorithms and memory management strategies (L2-Comprehension).</li> <li><b>Apply</b> the principles of concurrency and synchronization, to write concurrent programs/software (L3-Application).</li> </ol>			
<b>Module-1</b>			<b>(8L+2P)</b>
<b>INTRODUCTION:</b> What operating systems do - User view, System view, Defining operating systems, Operating System Structure, Operating System Operations – Dual mode and multi-mode operation, Timer, Process Management; Memory Management; Storage Management; Protection and Security. [1.1, 1.4 to 1.9]			
<b>SYSTEM STRUCTURES:</b> Operating System Services; System calls; Types of system calls; System programs; Operating System Structure –Simple structure, Layered approach, Micro kernels, Modules [2.1, 2.3 to 2.5, 2.7.1-2.7.4]			
<b>Self study :</b> Hybrid Systems – Mac OS X, iOS, Android.[ 2.7.5]			
<b>Module-2</b>			<b>(8L+6P)</b>
<b>PROCESS:</b> Process concept, Process state, Process control block, Process scheduling, Scheduling queues, Schedulers, Context switch, Operations on processes – Process creation and termination, Inter-process communication, Shared memory and message passing systems. [3.1 to 3.4]			
<b>PROCESS MANAGEMENT:</b> Basic concepts, CPU scheduler, Preemptive and non-preemptive scheduling, Scheduling criteria, Scheduling algorithms – FCFS, SJF, Priority and Round robin scheduling, [Textbook 1: Chapters 5.1 to 5.3.4]			
<b>Self Study :</b> Multi-level and multilevel feedback queue scheduling[5.3.5,5.3.6]			
<b>Module-3</b>			<b>(8L+6P)</b>
<b>THREADS:</b> Overview, Benefits, Multi core Programming, Types of parallelism, Multi threading models. [4.1-4.3]			
<b>PROCESS SYNCHRONIZATION:</b> Background, The Critical section problem, Peterson's solution, Synchronization hardware, Mutex locks, Semaphores, Classic problems of synchronization, Bounded buffer problem. [Textbook 1: Chapters 6.1 to 6.7.1]			
<b>Self-Study :</b> Readers writer's problem, Dining philosopher's problem.[ 6.7.2 , 6.7.3]			
<b>Module-4</b>			<b>(8L+6P)</b>
<b>DEADLOCKS:</b> System model, Deadlock characterization, Methods for handling deadlocks, Deadlock prevention, Deadlock avoidance, Deadlock detection and recovery from deadlock. [7.1-7.7]			
<b>MEMORY MANAGEMENT:</b> Background, Basic hardware, Address binding, Logical and physical address, swapping, Dynamic loading and linking [8.1, 8.2]			
<b>Module-5</b>			<b>(8L+6P)</b>
<b>MEMORY MANAGEMENT:</b> Contiguous memory allocation, Segmentation, Paging. [8.3, 8.4, 8.5]			
<b>VIRTUAL MEMORY MANAGEMENT:</b> Basic concepts, Demand paging, Copy-on-write, Page replacement – FIFO, LRU, Optimal [1:9.1-9.4]			
<b>Self-Study:</b> Structure of page table, Hierarchical paging, Hashed paging, Inverted paging. [8.6]			

<b>NOTE: Self-study topics are assessed only in CIE-Quizzes/ Assignment</b>
<b>Course outcomes:</b> On successful completion of this course, students will be able to: 6. <b>Identify</b> the services, functions and structure of different operating systems. 7. <b>Apply and analyze</b> appropriate scheduling algorithm for process selection and execution. 8. <b>Identify and analyze</b> the techniques used to solve process synchronization issues. 9. <b>Apply and analyze</b> various deadlock prevention, avoidance, detection and recovery mechanisms to solve real world problems. 10. <b>Analyze</b> the performance of various memory management techniques and page replacement algorithms.
<b>Question paper pattern:</b> <ul style="list-style-type: none"> <li>• The question paper will have ten full questions carrying equal marks.</li> <li>• Each full question will be for 20 marks.</li> <li>• There will be two full questions (with a maximum of four sub-questions) from each module.</li> <li>• Each full question will have sub-question covering all the topics under a module.</li> <li>• The students will have to answer five full questions, selecting one full question from each module.</li> </ul>

<b>Textbooks</b>				
1	Operating System Concepts	Abraham Silberschatz, Peter Baer Galvin, Greg Gagne	Wiley-India, 9th edition	2013
<b>Reference Books</b>				
1	Operating System - A Concept Based Approach,	D.M Dhamdhere	Tata McGraw-Hill	2nd Edition, 2002
2	Operating Systems,	P.C.P. Bhatt	PHI	4th Edition, 2013

**Lab Syllabus:****Implementation of programs on the following Operating System concepts:**

1. Threads
2. Process Scheduling.
3. Process Synchronization.
4. Deadlock Avoidance.
5. Memory allocation techniques.
6. Page Replacement Algorithms

**B.E COMPUTER SCIENCE & ENGINEERING**  
**OUTCOME BASED EDUCATION (OBE) AND CHOICE BASED CREDIT SYSTEM (CBCS)**  
**SEMESTER - III**

**DIGITAL CIRCUITS & COMPUTER ORGANIZATION**

Course Code	S3CCSI02	CIE Marks	50
Teaching Hours/Week (L:T:P)	(3:0:2)	SEE Marks	50
Credits	4	Exam Hours	3

**Course objectives:**

1. **Analyse** the basic structure of a computer and how computer programs are organized, stored and executed at the machine level
2. **Identify** the data path elements needed to implement single bus and three bus organization of a processor
3. **Design** control signal for of hardwired and micro programmed control
4. **Design & implement** different techniques used to perform arithmetic operations
5. **Illustrate** the basic types of memory and cache mapping functions

**Module-1** (8Hrs)

Basic Structure of Computer: Functional Units, Basic Operational Concepts, Bus Structures, Performance - Processor Clock, Basic Performance Equation, Clock Rate, Performance Measurement. Machine Instructions and Programs: Numbers, Arithmetic Operations and Characters - Number Representation, Addition of Positive Numbers, Addition and Subtraction of Signed Numbers, Overflow in Integer Arithmetic, Characters, Memory Location and Addresses - Byte Addressability, Big-endian and Little-endian Assignments, Word Alignment, Accessing Numbers, Characters, and Character Strings, Memory Operations, Instructions and Instruction Sequencing - Register Transfer Notation, Assembly Language Notation, Basic Instruction Types, Instruction Execution and Straight-Line Sequencing, Branching, Condition Codes.

Chapter1:1.1, 1.2, 1.3, 1.4, 1.6, 1.61, 1.62, 1.64, 1.67. Chapter2:2.1, 2.2, 2.3, 2.4.1 to 2.4.6.

**Module-2** (8Hrs)

Addressing Modes - Implementation of Variables and Constants, Indirection and Pointers, Indexing and Arrays, Relative Addressing, Additional Modes, Basic Input and Output Operations. Stacks and Queues, Subroutines - Subroutine Nesting and the Processor Stack, Parameter Passing, The Stack Frame , Basic Processing Unit: Some Fundamental Concepts – Single Bus Organization: Register Transfers, Performing an Arithmetic or Logic operation, Fetching a Word from Memory, Storing a word in Memory.

Chapter2: 2.5, 2.7, 2.8, 2.9. Chapter 7: 7.1.

**Module-3** (8Hrs)

Basic Processing Unit: Execution of a Complete Instruction - Branch Instructions, Multiple Bus Organization, Hard wired Control - A Complete Processor, Micro programmed Control - Microinstructions. Arithmetic: Addition and Subtraction of Signed Numbers - Addition/Subtraction Logic Unit, Design of Fast Adders - Carry-Lookahead Addition.

Chapter7: 7.2-7.4, 7.5.1.

**Module-4** (8Hrs)

Arithmetic: Multiplication of Positive Numbers, Signed Operand Multiplication - Booth Algorithm, Fast Multiplication - Bit-Pair Recoding of Multipliers, Carry-Save Addition of Summands, Integer Division, Floating-point Numbers and Operations - IEEE Standard for Floating-Point Numbers, Arithmetic Operations on Floating-Point Numbers - Addition and Subtraction Operations, Implementing Floating-Point Operations.

Chapter6: 6.1 -,6.7.

### **Module-5**

**(8Hrs)**

Memory System: Some Basic Concepts, Semiconductor RAM Memories - Internal Organization of Memory Chips, Static Memories, Asynchronous DRAMs, Synchronous DRAMs, Structure of Larger Memories, Memory System Considerations, Read Only Memories - ROM, PROM, EPROM, EEPROM, Flash Memory, Speed, Size, and Cost, Cache Memories -Mapping Functions

Chapter5: 5.1-5.4, 5.5.1, 5.5.2.

### **LAB COMPONENT**

Week 1 : Introduction to digital trainer kits & verification of basic gates

Week 2 onwards in every lab the instructions and design of the following experiments to be taught during the first one hour of the lab. The second hour is to be utilized in conducting the experiments and verification of truth tables.

1. Design and implementation of a Half- adder and a full adder using minimum number of 2 input NAND gates
2. Given any 4-variable logic expression, simplify using Entered Variable Map and realize the simplified logic expression using 8:1 or (2) 4:1 Multiplexer IC.
3. Design and implement Full Adder and Full Subtractor using 4:1 MUX.
4. Design and implement full-adder and full-subtractor using a 74138 DECODER.
5. Design and test one/ two-bit Magnitude Comparator and verify its true table. Realize a J-K Master/Slave Flip-Flop using NAND gates and verify its truth table.
6. Design and implement a mod-n ( $n < 8$ ) Synchronous up Counter using J-K Flip-Flop Ics, display the result on discrete LEDs.
7. Design and implement the following using 4-bit Shift register IC.
  - i) Left Shift ii) SIPO iii) SISO iv) PIPO v) Ring Counter vi) Johnson counter
8. Design and implement an Asynchronous Counter using Decade Counter IC to Count up from 0 to 9. Display the count value on 7 Segment LED display using BCD to 7 segment code converter IC.
9. Design and implement a 3 stage Asynchronous Counter using a J-K Flip Flops to count from 0 to n.

### **Course outcomes:**

On successful completion of this course, students will be able to:

1. **Illustrate** the basic operational concepts of a computer system and **discuss** its performance parameters
2. **Interpret** various addressing modes and **apply** the same to **design** solution to a given problem
3. **Discuss** basic processing unit to generate control signals and to **design** the control sequence for execution of an instruction
4. **Explain** the various arithmetic algorithms and **apply** the same to solve a given problem
5. **Describe** memory organization and **design** the solution to the given problem

**Question paper pattern:**

- The question paper will have ten full questions carrying equal marks.
- Each full question will be for 20 marks.
- There will be two full questions (with a maximum of four sub- questions) from each module.
- Each full question will have sub- question covering all the topics under a module.
- The students will have to answer five full questions, selecting one full question from each module.

<b>Reference Books</b>				
1	Computer Organization & Architecture	William Stallings.	PHI	2006
2	Computer Systems Design and Architecture	Vincent P. Heuring & Harry F. Jordan	PEARSON	2004

**B.E COMPUTER SCIENCE & ENGINEERING**  
**OUTCOME BASED EDUCATION (OBE) AND CHOICE BASED CREDIT SYSTEM (CBCS)**  
**SEMESTER - III**

**DATA STRUCTURES AND APPLICATIONS**

Course Code	S3CCS01	CIE Marks	50
Teaching Hours/Week (L:T:P)	(3:0:0)	SEE Marks	50
Credits	3.0	Exam Hours	3

**Course objectives:**

1. Discuss the concepts of structures, union, files and dynamic memory allocation techniques.
2. Describe the properties of various data structures such as Stacks, Queues, Lists, and Trees.
3. Implement the data structures such as Stacks, Queues, Lists, and Trees using C language.
4. Discuss the applications of various Data Structures.

**Module-1** **(08L hrs)**

**Structures and Unions:** Defining a Structure, declaring Structure variables, accessing Structure members, Structure initialization, copying and comparing Structure variables, operations on individual members, array of Structures, array within Structure, Structure within Structure, Structures and Functions, Unions, size of structures.

**File management in C:** Defining and Opening a file, Closing a file, Input/Output operations on files - getc(), putc(), getw(), putw(), fscanf(), fprintf(), Error handling during I/O operations - feof(), perror(), Random access to files - ftell(), rewind(), fseek(), Command line arguments.

(Text Book 1: 10, 12)

**Module-2** **(08L hrs)**

**The Stack:** Definition and Examples, representing Stacks in C, Example: Infix, Postfix, and Prefix.

**Recursion:** Recursive Definition and Processes, Recursion in C, Writing recursive programs: The Towers of Hanoi Problem, Efficiency of Recursion.

**Queues and Lists:** The Queue and Its Sequential Representation: C implementation of Queues, Insertion, Deletion and Display operations, Types of Queues (Linear and Circular Queues)

Self-Study: Priority and Double Ended Queues (Only concepts).

(Text Book2: 2, 3.1, 3.2, 3.3(only the Towers of Hanoi Problem), 3.5. 4.1(excluding Queue as an ADT))

**Module-3** **(08L hrs)**

**Queues and Lists Continued**

**Dynamic memory allocation:** malloc(), calloc(), realloc(), free().

(Text Book 1: 13.1-13.6)

**Linked lists:** Inserting and removing nodes from a list, linked implementation of stacks, getnode and freenode operations, linked implementation of queues, examples of list operation, list implementation of priority queues, header nodes.

**Lists in C:** allocating and freeing dynamic variables, linked lists using dynamic variables, queues as lists in C, examples of list operations in C, non-integer and non-homogeneous lists, Addition of two polynomials, implementing header nodes.

(Text Book2: 4.2, 4.3(except array implementation of list, Limitations of array implementation, comparing dynamic and array implementations of list))

**Module-4** **(07L hrs)**

**Other List Structures:** Circular lists, stack as a Circular list, queue as a Circular list, primitive operations on circular lists, the Josephus problem, Doubly linked lists, Primitive operations on Doubly linked list.

(Text Book2: 4.5(except addition of long positive integers using circular and doubly linked list))

**Module-5**
**(09L hrs)**

**Trees:** Operations on Binary Trees, Applications of Binary Trees, Binary Tree Representations: Node representation of Binary Trees, Internal and External Nodes, Implicit array representation of Binary Trees, Binary Tree Traversals in C.

Trees and Their applications: C Representations of Trees, Tree Traversals, General Expressions as Trees, Evaluating an Expression Tree, Constructing a Tree.

Self-Study: Threaded Binary Trees - definition and types.

(Text Book2: 5.1, 5.2, 5.5(except choosing Binary Tree Representation, Traversal using a Father field, Heterogeneous Binary Trees))

**Course outcomes:**

On successful completion of this course, students will be able to:

1. **Apply** advanced C programming techniques like pointers, structures, union and files to **develop** solution for a given problem
2. **Discuss and implement** different linear data structures like stacks and queues using static memory allocation technique
3. **Discuss** different types of linked lists and **implement** using dynamic memory allocation technique
4. **Discuss** non-linear data structures like trees and **implement** using dynamic memory allocation technique.
5. **Apply** the knowledge of stacks, queues, linked lists and trees to **design** and **develop** solutions to given problems

**Question paper pattern:**

- The question paper will have ten full questions carrying equal marks.
- Each full question will be for 20 marks.
- There will be two full questions (with a maximum of four sub- questions) from each module.
- Each full question will have sub- question covering all the topics under a module.
- The students will have to answer five full questions, selecting one full question from each module.

**SEMESTER - III**

**DATA STRUCTURES AND APPLICATIONS LABORATORY**

Course Code	S3CCSL01	CIE Marks	50
Teaching Hours/Week (L:T:P)	(0:0:2)	SEE Marks	50
Credits	1	Exam Hours	3

**Course objectives:**

1. Design and implement different data structures.
2. Develop C programs for various applications of data structures.
3. Select appropriate data structure for a given problem.

Sl. no.	Programs										
1	<p>Develop a C program to create a sequential file for storing employee records with each record having following information:</p> <table border="1" style="margin-left: auto; margin-right: auto;"> <tr> <th>Employee_Id</th> <th>Name</th> <th>Department</th> <th>Salary</th> <th>Age</th> </tr> <tr> <td>Non-Zero Positive integer</td> <td>25 Characters</td> <td>25 Characters</td> <td>Positive Integer</td> <td>Positive integer</td> </tr> </table> <p>Write necessary functions to perform the following operations:</p> <ul style="list-style-type: none"> <li>a) Read the details of a record.</li> <li>b) Display all the records in the file.</li> <li>c) Search for a specific records based on Department. In case if the required record is not found, suitable message should be displayed.</li> </ul>	Employee_Id	Name	Department	Salary	Age	Non-Zero Positive integer	25 Characters	25 Characters	Positive Integer	Positive integer
Employee_Id	Name	Department	Salary	Age							
Non-Zero Positive integer	25 Characters	25 Characters	Positive Integer	Positive integer							
2	Develop a C program to implement Stack of names to perform the push, pop and display operations.										
3	Develop a C program to convert a valid infix expression to postfix.										
4	Develop a C program to evaluate the given postfix expression.										
5	Develop a C program to implement Linear Queue of characters to perform the insertion, deletion and display operations.										
6	Develop a C program to implement Circular Queue of integers to perform the insertion, deletion and display operations.										
7	<p>Define a structure to represent a node in a Singly Linked List. Each node must contain following information: player name, team name and batting average. Develop a C program using functions to perform the following operations on a list of cricket players:</p> <ul style="list-style-type: none"> <li>a) Add a player at the end of the list.</li> <li>b) Search for a specific player and update his/her batting average if the player exists.</li> <li>c) Display the details of all the players.</li> </ul>										
8	Develop a C program to add two two-variable polynomials using Singly Linked list.										
9	<p>Develop a C program to construct two ordered singly linked lists using functions to perform following operations:</p> <ul style="list-style-type: none"> <li>a) Insert an element into a list.</li> <li>b) Merge the two lists.</li> <li>c) Display the contents of the list.</li> </ul>										
10	<p>Define a structure to represent a node in a Linear Doubly Linked List. Each node must contain following information: Student name, USN, branch and year of admission. Develop a C program using functions to perform the following operations on a list of students:</p> <ul style="list-style-type: none"> <li>a) Add a student at the beginning of the list.</li> <li>b) Display the details of the students of a specified branch.</li> </ul>										

	c) Delete the student with specified USN. d) Display the details of all the students.
11	Develop a C program to implement Josephus problem using Circular Singly Linked List. Write necessary functions to perform the following operations: a) Add a soldier to the list. b) Delete a soldier from the list.
12	Develop a C program to perform the following operations: a) Construct a binary search tree of integers. b) Traverse the tree in Inorder. c) Delete a given node from the BST.
13	Develop a C program to construct an expression tree for a given postfix expression and evaluate the expression tree.

### **Open Ended Problems**

These problems are introduced to make the students to apply the knowledge of Data Structures in solving real world problems. Following are the guidelines:

- Each team (3/4 students) from each batch should come up with the problem statement for an application of any of the data structures like files, stacks, queues, linked lists and trees.
- Faculty-incharge approves the problem based on the complexity of the problem chosen.
- Each team has to implement the problem statement within the deadline.

Implementation will be considered for Continuous Internal Evaluation (CIE) and it will be based on individual contribution of the students in each team.

#### **Course outcomes:**

On successful completion of this course, students will be able to:

1. **Design and develop** C programs by applying advanced C programming techniques like pointers, structures and files to solve a given problem
2. **Design and develop** C programs to implement linear data structures like stack, queue and explore its applications by **applying** the knowledge of static memory allocation technique
3. **Design and develop** C programs to implement linked lists and its types by applying the knowledge of dynamic memory allocation technique
4. **Apply** the knowledge of dynamic memory allocation technique to implement non-linear data structures like trees and to **design and develop** solutions for applications on trees

#### **Conduct of Practical Examination:**

- All laboratory experiments are to be included for practical examination.
- Breakup of marks and the instructions printed on the cover page of answer script to be strictly adhered by the examiners.
- Students can pick one experiment from the questions lot prepared by the examiners.
- Change of experiment is allowed only once and 20% Marks is to be deducted.

**B.E COMPUTER SCIENCE & ENGINEERING**  
**OUTCOME BASED EDUCATION (OBE) AND CHOICE BASED CREDIT SYSTEM (CBCS)**  
**SEMESTER - III**

**JAVA PROGRAMMING**

Course Code	S3CCSI03	CIE Marks	50
Teaching Hours/Week (L:T:P)	(2:0:2)	SEE Marks	50
Credits	3	Exam Hours	3

**Course objectives:**

1. Learn fundamental features of object oriented language and JAVA
2. Set up Java JDK environment to create, debug and run simple Java programs.
3. Learn object oriented concepts using programming examples.
4. Study the concepts of importing of packages and exception handling mechanism

**Module-1** **(4L+6Phrs)**

**AN OVERVIEW OF JAVA:** Object-Oriented Programming, A First Simple Program, A Second Short Program, Two Control Statements, Using Blocks of Code, Lexical Issues, The Java Class Libraries, Data Types, Variables, and Arrays: The Primitive Types, Integers, Floating-Point Types, Characters, Booleans, A Closer Look at Literals, Variables, Type Conversion and Casting, Automatic Type Promotion in Expressions, Arrays, A Few Words About Strings. Arithmetic Operators, the Bitwise Operators, Relational Operators, Boolean Logical Operators, The Assignment Operator, Control Statements: Java's SelectionStatements, Iteration Statements, Jump Statements.

Text book 1: Ch 2, Ch 3, Ch 4, Ch 5

**Module-2** **(6L+6P hrs)**

**INTRODUCING CLASSES**

Class Fundamentals, Declaring Objects, Assigning Object Reference Variables, Introducing Methods, Constructors, The this Keyword, Garbage Collection, The finalize( ) Method, A Stack Class, A Closer Look at Methods. and Classes: Overloading Methods, Using Objects as Parameters, A Closer Look at Argument Passing, Returning Objects, Recursion, Introducing Access Control, Understanding static, Introducing final, Arrays Revisited.

Text book 1: Ch 6, Ch 7 ( 7.1-7.9 )

**Module-3** **(4L+4P hrs)**

**INHERITANCE**

Inheritance, Using super, Creating a Multilevel Hierarchy, When Constructors Are Called, Method Overriding, Dynamic Method Dispatch, Using Abstract Classes, Using final with Inheritance, The Object Class.

Text book 1: Ch 8

**Module-4** **(8L+6P hrs)**

**Introducing the AWT: Working with Windows, Graphics, and Text**

AWT Classes: Window Fundamentals, Component, Container, Panel, Window, Frame, Canvas, Working with Frame Windows, Creating a Frame Window in an Applet, Handling Events in a Frame Window. Working with Graphics: Drawing Lines, Rectangles etc, Working with Color, working with Fonts.

**Using AWT Controls and Layout Managers:** Control Fundamentals: Adding and Removing Controls, Using Buttons, Checkbox Group, Using Lists. Understanding Layout Managers such as Flow Layout, Border Layout, Grid Layout. Handling Events by extending AWT Components.

Text book 1: Ch 23, Ch 24

**Module-5****(4L+4P hrs)****PACKAGES AND INTERFACES**

Packages, Access Protection, Importing Packages, Interfaces, Exception Handling: Exception-Handling Fundamentals, Exception Types, Uncaught Exceptions, Using try and catch, Multiple catch Clauses, Nested try Statements, throw, throws, finally, Java's Built-in Exceptions, Creating Your Own Exception Subclasses, Chained Exceptions, Using Exceptions.

Text book 1: Ch 9, Ch 10

**Course outcomes:**

**On successful completion of this course, students will be able to:**

1. Explain the features and object oriented concepts in JAVA programming
2. Analyse working of bitwise operators in JAVA.
3. Develop simple programs based on polymorphism and Inheritance.
4. Describe the concepts of importing packages and exception handling mechanics.

**Question paper pattern:**

- The question paper will have ten full questions carrying equal marks.
- Each full question will be for 20 marks.
- There will be two full questions (with a maximum of four sub- questions) from each module.
- Each full question will have sub- question covering all the topics under a module.
- The students will have to answer five full questions, selecting one full question from each module.

Sl. No.	Title of the Book	Name of the Author/s	Name of the Publisher	Edition and Year
<b>Textbooks</b>				
1	Java The Complete Reference, 7th Edition, Tata McGraw Hill, 2007	Herbert Schildt	Tata McGrawhill	7 <sup>th</sup> Edition,2007
<b>Reference Books</b>				
1	Object-Oriented Programming With JAVA Essentials and Applications	RajKumar Buyya, S Thamarai Selvi,	McGraw Hill	2009
2	WEB LINKS AND VIDEO LECTURES (e-RESOURCES) :	<a href="https://onlinecourses.nptel.ac.in/noc22_cs47/preview">https://onlinecourses.nptel.ac.in/noc22_cs47/preview</a> <a href="http://www.mhhe.com/buyya/oopj">http://www.mhhe.com/buyya/oopj</a>		

**Course objectives:**

1. Learn fundamental features of object oriented language and JAVA
2. Set up Java JDK environment to create, debug and run simple Java programs.
3. Learn object oriented concepts using programming examples.
4. Study the concepts of importing of packages and exception handling mechanism

Sl. No.	Experiments
1	Write a JAVA program that prints all real solutions to the quadratic equation $ax^2+bx+c=0$ . Read in a, b, c and use the quadratic formula.
2	Write a JAVA program to sort list of elements in ascending and descending order using bubble sort

3	Create a JAVA class called Student with the following details as variables within it. USN NAME BRANCH PHONE PERCENTAGE Write a JAVA program to create n Student objects and print the USN, Name, Branch, Phone, and percentage of these objects with suitable headings.
4	Write a JAVA program demonstrating Method overloading and Constructor overloading.
5	Design a super class called Staff with details as Staff ID, Name, Phone, and Salary. Extend this class by writing three subclasses namely Teaching (domain, publications), Technical (skills), and Contract (period). Write a JAVA program to read and display at least 3 staff objects of all three categories.
6	Design and develop a Multi-threaded program using Thread class or Runnable Interface.
7	Design and develop Web applications using Java Applets. Handle different
8	Develop a Program to Launch the browser and open a specific URL
9	Develop Program to open a file for printing
10	Demonstrate dynamic dispatch using abstract class in JAVA.
11	Create two packages P1 and P2. In package P1, create class A, class B inherited from A, class C. In package P2, create class D inherited from class A in package P1 and class E. Demonstrate working of access modifiers (private, public, protected, default) in all these classes using JAVA.
12	Write a JAVA program to read two integers a and b. Compute a/b and print, when b is not zero. Raise an exception when b is equal to zero. Also demonstrate working of Array Index Out Of Bound Exception.

**Course outcomes:**

On successful completion of this course, students will be able to:

1. Design and implement Object-oriented programming concepts using Core Java.
2. Develop multi-threaded programs and GUI based applications using Java Threads.
3. Design and develop Web applications using Java AWT packages.
4. Develop an application handling exceptions.

**Conduct of Practical Examination:**

- All laboratory experiments are to be included for practical examination.
- Breakup of marks and the instructions printed on the cover page of answer script to be strictly adhered by the examiners.
- Students can pick one experiment from the questions lot prepared by the examiners.
- Change of experiment is allowed only once and 20% Marks is to be deducted.

**B.E COMPUTER SCIENCE & ENGINEERING**  
**Outcome Based Education (OBE) and Choice Based Credit System (CBCS)**  
**SEMESTER – III**

**WEB PROGRAMMING**

Course Code	S3CCSI04	CIE Marks	50
Teaching Hours/Week (L:T:P)	(2:0:2)	SEE Marks	50
Credits	3	Exam Hours	03

**Course objectives:**

1. To use the syntax and semantics of HTML and XHTML
2. To develop different parts of a web page
3. To understand how CSS can enhance the design of a webpage.
4. To create and apply CSS styling to a webpage
5. To get familiarity with the JavaScript language and understand Document Object Model handling of Java Script

**Module-1** (5L+ 4P)

**Fundamentals of WWW:** A Brief Introduction to the Internet, The World Wide Web, Web Browsers, Web Servers, Uniform Resource Locators, client-server architecture, difference between static and dynamic web pages.

**Traditional HTML and XHTML:**

First Look at HTML and XHTML, Hello HTML and XHTML World, HTML and XHTML: Version History, HTML and XHTML DTDs: The Specifications Up Close, (X)HTML Document Structure, Browsers and (X)HTML, The Rules of (X)HTML, Major Themes of (X)HTML, The Future of Markup—Two Paths?

**TextBook1: Chapter 1**

**Module-2** (5L+ 6P)

**HTML5:**

Hello HTML5, Loose Syntax Returns, XHTML5, HTML5: Embracing the Reality of Web Markup, Presentational Markup Removed and Redefined, HTML5 Document Structure Changes, Adding Semantics, HTML5’s Open Media Effort, Client-Side Graphics with <canvas>, HTML5 Form Changes, Emerging Elements and Attributes to Support Web Applications

**TextBook1: Chapter 2**

**Module-3** (5L+6 P)

**Cascading Style Sheets (CSS):**

Introduction, CSS Overview , CSS Rules, Example with Type Selectors and the Universal Selector, CSS Syntax and Style, Class Selectors, ID Selectors, span and div Elements, Cascading, styleAttribute, style Container, External CSS Files, CSS Properties, Color Properties, RGB Values for Color, Opacity Values for Color, HSL and HSLA Values for Color, Font Properties, line-height Property, Text Properties, Border Properties, Element Box, padding Property, margin Property , Case Study: Description of a Small City’s Core Area.

**Bootstrap:** Introduction to Bootstrap, Why use Bootstrap, Bootstrap Examples-Tables, forms, nav menu, Jumbotron

**TextBook2:- Chapter 3**

**Module-4** (5L+ 4P)

**Module-4: Tables and CSS, Links and Images**

Table Elements, Formatting a Data Table: Borders, Alignment, and Padding, CSS Structural Pseudo-Class Selectors, thead and tbody Elements, Cell Spanning, Web Accessibility, CSS display Property with Table Values, a Element, Relative URLs, Navigation Within a Web Page, CSS for Links, Bitmap Image Formats: GIF, JPEG, PNG, img Element, Responsive Images, Positioning Images, Shortcut Icon, iframe Element .

**TextBook2: 5.2 to 5.8, 6.2, 6.3, 6.6., 6.7, 6.9, 6.10, 6.12, 7.2 to 7.4****Module-5****(6L+6 P)****Module-5: Introduction to JavaScript: Functions, DOM, Forms, and Event Handlers**

History of JavaScript, Hello World Web Page, Buttons, Functions, Variables, Identifiers, Assignment Statements and Objects, Document Object Model, Forms and How They're Processed: Client-Side Versus Server-Side, form Element, Controls, Text Control, Accessing a Form's Control Values, reset and focus Methods

**TextBook2: 8.2 to 8.13, 8.15, 8.16****LAB COMPONENT**

1. Create an XHTML page using tags to accomplish the following:
  - (i) A paragraph containing text “All that glitters is not gold”. Bold face and italicize this text
  - (ii) Create equation:  $x = 1/3(y_1^2 + z_1^2)$
  - (iii) Put a background image to a page and demonstrate all attributes of background image
  - (iv) Create unordered list of 5 fruits and ordered list of 3 flowers
2. Create following table using XHTML tags. Properly align cells, give suitable cell padding and cell spacing, and apply background color, bold and emphasis necessary

<b>Department</b>	<b>Sem1</b>	<i>SubjectA</i>
		<i>SubjectB</i>
		<i>SubjectC</i>
	<b>Sem2</b>	<i>SubjectE</i>
		<i>SubjectF</i>
		<i>SubjectG</i>
	<b>Sem3</b>	<i>SubjectH</i>
		<i>SubjectI</i>
		<i>SubjectJ</i>

## 3. Use HTML5 for performing following tasks:

- (i) Draw a square using HTML5 SVG , fill the square with green color and make 6px brown stroke width
- (ii) Write the following mathematical expression by using HTML5 MathML. $d=x^2-y^2$
- (iii) Redirecting current page to another page after 5 seconds using HTML5 meta tag

4. Demonstrate the following HTML5 Semantic tags- `<article>`, `<aside>`, `<details>`, `<figcaption>`, `<figure>`, `<footer>`, `<header>`, `<main>`, `<mark>`, `<section>` for a webpage that gives information about travel experience.5. Create a class called **income**, and make it a background color of #0ff. Create a class called **expenses**, and make it a background color of #f0f. Create a class called **profit**, and make it a background color of #f00.

Throughout the document, any text that mentions income, expenses, or profit, attach the appropriate class to that piece of text. Further create following line of text in the same document:

The current price is 50₹ and new price is 40₹

6. Change the tag **li** to have the following properties:

- A display status of inline
- A medium, double-lined, black border
- No list style type

Add the following properties to the style for **li**:

- Margin of 5px
- Padding of 10px to the top, 20px to the right, 10px to the bottom, and 20px to the left

Also demonstrate list style type with user defined image logos
7.Create sign up web page using HTML and CSS with tabular layout
8.Create calculator interface with HTML and CSS
9.Write a Java Script program that on clicking a button, displays scrolling text which moves from left to right with a small delay
10.Create a webpage containing 3 overlapping images using HTML, CSS and JS. Further when the mouse is over any image, it should be on the top and fully displayed.

**Course outcomes:**

On successful completion of this course, students will be able to:

1. Explain the historical context and justification for HTML over XHTML
2. Develop HTML5 documents and adding various semantic markup tags
3. Analyse various attributes, values and types of CSS
4. Apply the knowledge of HTML,CSS and JavaScript to develop webpages..

**Question paper pattern:**

- The question paper will have ten full questions carrying equal marks.
- Each full question will be for 20 marks.
- There will be two full questions (with a maximum of four sub- questions) from each module.
- Each full question will have sub- question covering all the topics under a module.
- The students will have to answer five full questions, selecting one full question from each module.

<b>PYTHON PROGRAMMING</b>			
Course Code	S3CCSI05	CIE Marks	50
Teaching Hours/Week (L:T:P)	(2:0:2)	SEE Marks	50
Credits	3.0	Exam Hours	03
<b>Course objectives:</b> <ol style="list-style-type: none"> <li>1. Implement Python programs using Python language construct</li> <li>2. Understand various data structures provided by Python library</li> <li>3. Use different libraries for scientific and data intensive applications</li> <li>4. Build real-world applications using OOP, files and exception handling provided by Python</li> <li>5. Determine the need for scraping websites and working with CSV, JSON and other file formats.</li> </ol>			
<b>Module-1</b> <span style="float: right;"><b>(5L+4P)</b></span>			
<b>Python Basics:</b> Entering Expressions into the Interactive Shell, The Integer, Floating-Point, and String Data Types, String Concatenation and Replication, Storing Values in Variables, Your First Program, Dissecting Your Program,			
<b>Flow control:</b> Boolean Values, Comparison Operators, Boolean Operators, Mixing Boolean and Comparison Operators, Elements of Flow Control, Program Execution, Flow Control Statements, Importing Modules, Ending a Program Early with <code>sys.exit()</code> ,			
<b>Functions:</b> <code>def</code> Statements with Parameters, Return Values and return Statements, The <code>None</code> Value, Keyword Arguments and <code>print()</code> , Local and Global Scope, The <code>global</code> Statement, A Short Program: Guess the Number Chapter1, Chapter2, Chapter3 ( Automate the Boring Stuff with Python by Al Sweigart )			
<b>Module-2</b> <span style="float: right;"><b>(5L+4P)</b></span>			
<b>Lists:</b> The List Data Type, Working with Lists, Augmented Assignment Operators, Methods, Example Program: Magic 8 Ball with a List, List-like Types: Strings and Tuples, References,			
<b>Dictionaries and Structuring Data:</b> The Dictionary Data Type, Pretty Printing, Using Data Structures to Model Real-World Things,			
<b>Manipulating Strings:</b> Working with Strings, Useful String Methods Chapter4, Chapter5, Chapter6 ( Automate the Boring Stuff with Python by Al Sweigart )			
<b>Module-3</b> <span style="float: right;"><b>(6L+6P)</b></span>			
<b>Pattern Matching with Regular Expressions:</b> Finding Patterns of Text Without Regular Expressions, Finding Patterns of Text with Regular Expressions, More Pattern Matching with Regular Expressions, Greedy and Non greedy Matching, The <code>findall()</code> Method, Character Classes, Making Your Own Character Classes, The Caret and Dollar Sign Characters, The Wildcard Character, Review of Regex Symbols, Case-Insensitive Matching, Substituting Strings with the <code>sub()</code> Method, Managing Complex Regexes, Combining <code>re .IGNORECASE</code> , <code>re .DOTALL</code> , and <code>re .VERBOSE</code> ,			
<b>Reading and Writing Files:</b> Files and File Paths, The <code>os.path</code> Module, The File Reading/Writing Process, Saving Variables with the <code>shelve</code> Module, Saving Variables with the <code>pprint.pformat()</code> Function, Project: Generating Random Quiz Files,			
<b>Organizing Files:</b> The <code>shutil</code> Module, Walking a Directory Tree, Compressing Files with the <code>zipfile</code> Module, Project: Renaming Files with American-Style Dates to European-Style Dates			
<b>Debugging:</b> Raising Exceptions, Getting the Traceback as a String, Assertions, Logging, IDLE's Debugger. Chapter7, Chapter9, Chapter10 & Chapter11 ( Automate the Boring Stuff with Python by Al			

Sweigart )	
<b>Module-4</b>	<b>(5L+6P)</b>
<b>Classes and objects:</b> Programmer-defined types, Attributes, Rectangles, Instances as return values, Objects are mutable, Copying,	
<b>Classes and methods:</b> Object-oriented features, Printing objects, Another example, A more complicated example, The <code>__init__</code> method, The <code>__str__</code> method, Operator overloading, Type-based dispatch, Polymorphism, Interface and implementation,	
<b>Inheritance:</b> Card objects, Class attributes, Comparing cards, Decks, Printing the deck, Add, remove, shuffle and sort, Inheritance, Class diagrams, Data encapsulation	
Chapter11 ( Introduction to Python Programming by Gowrishankar S, Veena A )	
<b>Module-5</b>	<b>(5L+6P)</b>
<b>Web Scraping:</b> Project: MAPIT.PY with the web browser Module, Downloading Files from the Web with the requests Module, Saving Downloaded Files to the Hard Drive, HTML, Parsing HTML with the BeautifulSoup Module	
<b>Working with Excel Spread sheets:</b> Excel Documents, Installing the open pyxl Module, Reading Excel Documents, Project: Reading Data from a Spread sheet, Writing Excel Documents	
<b>Working with CSV files and JSON data:</b> The csv Module, Project: Removing the Header from CSV Files, JSON and APIs, The json Module, Project: Fetching Current Weather Data	
Chapter12, Chapter13 & Chapter16 ( Automate the Boring Stuff with Python by Al Sweigart )	

**Course outcomes:**

On successful completion of this course, students will be able to:

1. Demonstrate proficiency in handling of loops and creation of functions.
2. Identify the methods to create and manipulate lists, tuples and dictionaries.
3. Discover the commonly used operations involving regular expressions and file system.
4. Interpret the concepts of Object-Oriented Programming as used in Python.
5. Determine the need for scraping websites and working with CSV, JSON and other file formats.

**Question paper pattern:**

- The question paper will have ten full questions carrying equal marks.
- Each full question will be for 20 marks.
- There will be two full questions (with a maximum of four sub- questions) from each module.
- Each full question will have sub- question covering all the topics under a module.
- The students will have to answer five full questions, selecting one full question from each module.

- Change of experiment is allowed only once and 20% Marks is to be deducted.

<b>B.E COMPUTER SCIENCE &amp; ENGINEERING</b> <b>Outcome Based Education (OBE) and Choice Based Credit System (CBCS)</b> <b>SEMESTER – III</b>			
<b>OBJECT ORIENTED PROGRAMMING WITH C++</b>			
Course Code	S3CCSI06	CIE Marks	50
Teaching Hours/Week (L:T:P)	(2:0:2)	SEE Marks	50
Credits	3	Exam Hours	3
<b>Course objectives:</b>			
<ul style="list-style-type: none"> <li>The course provides the basic principles of object-oriented programming using C++.</li> <li>The course introduces the following topics such as classes, overloading, data abstraction, information hiding, encapsulation, inheritance, polymorphism, templates.</li> <li>The course briefly covers C++ implementation and object-oriented considerations for software design and reuse.</li> </ul>			
<b>Module-1</b>			<b>(6L+4P Hrs)</b>
<b>PRINCIPLES OF OBJECT ORIENTED PROGRAMMING:</b> A look at procedure Oriented programming, Object Oriented Programming paradigm, Basic concepts of OOP, Benefits of OOP, A sample program, structure of C++ program.			
<b>TOKENS, CONTROL STRUCTURES:</b> Tokens, keywords, identifiers & constants, symbolic constants, reference variables, operators in C++, Scope Resolution Operator, Memory management operators, manipulators.			
<b>FUNCTIONS IN C++:</b> The main(), function prototyping, Inline function, Default arguments, const arguments, function overloading Book1:[1.3,1.4,1.5,1.6,2.3,2.5,2.6,3.2,3.3,3.4,3.93,13,3.15,3.17,3.18,4.2,4.3,4.6,4.7,4.10]			
<b>Module-2</b>			<b>(6L+6P Hrs)</b>
<b>CLASSES AND OBJECTS:</b> C structures, specifying class, member functions, Inline functions, nesting of member function, private member functions, arrays within a class, memory allocation for objects, static data members and member functions, arrays of objects, objects as function arguments, Friendly functions, returning objects.			
<b>CONSTRUCTORS AND DESTRUCTORS:</b> Introduction, constructors, parameterized constructors, multiple constructors in a class, constructors with default arguments, copy constructors, and destructors. Book1:[5.3,5.4,5.6,5.7,5.8,5.9,5.10,5.11,5.12,5.13,5.14,5.15,5.16,6.1,6.2,6.4,6.7,6.11]			
<b>Module-3</b>			<b>(5L+4P Hrs)</b>
<b>OPERATOR OVERLOADING:</b> Defining operator overloading, overloading unary and binary operators, overloading using friends, Rules for overloading operators.			
<b>TYPE CONVERSIONS:</b> Basic to Class type, class to basic type, one class to another class type, A data conversion example.			
<b>INHERITANCE:</b> Introduction, defining derived classes, single inheritance, making private member inheritable, multilevel, multiple, hierarchical, hybrid inheritance, virtual base classes Book1:[7.2,7.3,7.4,7.5,7.7,7.8,7.9,8.1,8.2,8.3,8.4,8.5,8.6,8.7,8.8,8.9]			
<b>Module-4</b>			<b>(5L+6P Hrs)</b>
<b>VIRTUAL FUNCTIONS AND POLYMORPHISM:</b> 'this' pointer, Pointer to derived classes, virtual function, pure virtual functions.			
<b>TEMPLATES:</b> class templates, class templates with multiple parameters, function templates, function templates with multiple parameters, overloading of template functions, member function			

templates, Non-type template arguments.

Book1:[9.4,9.5,9.6,9.7,12.1,12.2,12.4,12.5,12.6,12.7]

### Module-5

(6L+6P Hrs)

#### MANAGING CONSOLE I/O OPERATIONS:

C++ stream classes, unformatted I/O operations, Formatted console I/O operations.

**WORKING WITH FILES:** Opening and Closing a File, detecting EOF, More about Open(): File modes, File pointers and their manipulations, sequential and random access.

**EXCEPTION HANDLING:** Introduction, Basics of Exception handling, Exception Handling Mechanism, Throwing Mechanism, Catching Mechanism.

Book1:[10.3,10.4,10.5,11.3,11.4,11.5,11.6,11.7,13.1,13.2,13.3,13.4,13.5,13.6]

#### Course outcomes:

On successful completion of this course, students will be able to:

1. **Apply** the object-oriented programming concepts to solve real world problems
2. **Develop and demonstrate** the different overloading techniques.
3. **Develop** solutions for real world problems using inheritance and polymorphism concepts.
4. Develop generic programming skills using templates and programs to perform I/O operations using file handling.
5. **Apply** the exception handling methodology for handling errors.

#### Question paper pattern:

- The question paper will have ten full questions carrying equal marks.
- Each full question will be for 20 marks.
- There will be two full questions (with a maximum of four sub- questions) from each module.
- Each full question will have sub- question covering all the topics under a module.
- The students will have to answer five full questions, selecting one full question from each module.

Sl. No.	Title of the Book	Name of the Author/s	Name of the Publisher	Edition and Year
<b>Textbook</b>				
1	Object Oriented Programming with C++,	E Balagurusamy	Tata McGraw Hill	5th edition, ISBN: 9781259029936
<b>Reference Books</b>				
1	The Complete reference C++,	Herbert Schildt	Tata McGraw Hill	4th Edition
2	Object Oriented Programming with C++	Robert Lafore	SAMS Pearson Education	4th Edition
3	C++ Primer	Stanley B. Lippman,	Addison Wesley	4th edition, 2005
4	Object- Oriented Programming with C++	Sourav Sahay	Oxford University Press	1st edition, 2009

Sl. no.	<b>Programming Assignments:</b>
1	Develop a program to swap two numbers using reference variable and function swap( ).
2	Develop a C++ program to compute the area of circle, rectangle and triangle (given with 3 sides) by overloading the area( ) function.
3	Develop a C++ program to create a class FLOWER with following characteristics: Name, Colour, Price. Display the names of all flower costing more than 25 rupees.
4	Develop a C++ program to create a class POINT with two floating point data members and illustrate the concept of default constructor, parameterized constructor and copy constructor for initializing the objects of POINT type
5	Develop a program to overload unary prefix --(Pre-decrement) and binary + operators using friend function.
6	Develop a C++ program to create a class STUDENT with data members USN, name and age. Using inheritance create a class UGSTUDENT having fields semester, fees and stipend. Enter data for at least 5 students and compute the semester wise average age for UG students.
7	Develop a vector class template for performing the scalar product of int type vectors as well as float type vectors.
8	Develop a C++ program using function template called bubbleSort( ) to sort the given array elements.
9	Develop a C++ program to define media class with suitable data members and member functions. Define Book class and tape class which derives the properties of media class. Use display( ) function to display the contents of the class. Create pointers to media class to access the functions of derived class.
10	Develop a program in C++ to illustrate the divide by zero exception handling.
11	Develop a program that has multiple catch statements to handle various types of exceptions.
12	Develop a C++ program to create a text file, check file created or not, if created it will write some text into the file and then read the text from the file.
<b>Conduct of Practical Examination:</b>	
<ul style="list-style-type: none"> <li>• All laboratory experiments are to be included for practical examination.</li> <li>• Breakup of marks and the instructions printed on the cover page of answer script to be strictly adhered by the examiners.</li> <li>• Students can pick one experiment from the questions lot prepared by the examiners.</li> <li>• Change of experiment is allowed only once and 20% Marks is to be deducted.</li> </ul>	

<b>B.E COMPUTER SCIENCE &amp; ENGINEERING</b> <b>Outcome Based Education (OBE) and Choice Based Credit System (CBCS)</b> <b>SEMESTER – III</b>			
<b>SOCIAL CONNECT &amp; RESPONSIBILITY</b>			
Course Code	SHS01	CIE Marks	100
Teaching Hours/Week (L:T:P)	(0:0:2)	SEE Marks	-
Credits	1	Exam Hours	-
<b>Course objectives:</b>			
<ul style="list-style-type: none"> <li>Enable the student to do a deep drive into societal challenges being addressed by NGO(s), social enterprises &amp; The government and build solutions to alleviate these complex social problems through immersion, design &amp; technology.</li> <li>Provide a formal platform for students to communicate and connect with their surroundings.</li> <li>Enable to create of a responsible connection with society.</li> </ul>			
<b>Contents:</b>			
<p>The course is mainly activity-based that will offer a set of activities for the student that enables them to connect with fellow human beings, nature, society, and the world at large. The course will engage students in interactive sessions, reading groups and semester-long activities conducted by faculty mentors. In the following a set of activities planned for the course have been listed:</p>			
<b>Learning Outcomes:</b> The students are expected to have the ability to: <ol style="list-style-type: none"> <li>Understand social responsibility</li> <li>Practice sustainability and creativity</li> <li>Showcase planning and organizational skills</li> </ol>			
<b>Module-1</b>			<b>(6Hrs)</b>
<b>Plantation and adoption of a tree:</b> Plantation of a tree by Miyawaki Method that will be adopted by entire semester by a group of students. They will also make an excerpt either as a documentary or a photoblog describing the plant's origin, its usage in daily life, and its appearance in folklore and literature			
<b>Module-2</b>			<b>(6Hrs)</b>
<b>Heritage walk and crafts corner:</b> Heritage tour, knowing the history and culture of the city, connecting to people around through their history, knowing the city and its craftsman, photoblog and documentary on evolution and practice of various craft forms.			
<b>Module-3</b>			<b>(4Hrs)</b>
<b>Organic farming:</b> Definition of organic farming, Organically grown crops in India, Differentiate between conventional farming and organic farming, Necessity of organic farming, Key characteristics of organic farming, Four principles of organic farming(principle of Health, principle of ecology, principle of fairness and principle of care),Types of organic farming: 1) Pure organic farming, 2) Integrated farming (Integrated nutrient management and Integrated pest management), objectives of organic farming, benefits of organic farming, Basic steps in organic farming and limitations of organic farming.			
<b>Module-4</b>			<b>(6Hrs)</b>
<b>Water Conservation:</b> Global Water Scarcity - Global water crisis and its implications; Rainwater Harvesting - Concept and benefits of rainwater harvesting; Water Audit – An approach to water conservation; Efficient Water Use - Optimizing water consumption in daily life .			

<b>Module-5</b>	<b>(4Hrs)</b>																	
<b>Food Walk</b> City's culinary practices, food lore, and indigenous materials of the region used in cooking.																		
<b>Activities:</b>																		
Plantation and adoption of a tree: Select suitable species in consultation with horticulture, forest or agriculture department. Interact with NGO/Industry and community to plant Tag the plant for continuous monitoring																		
Heritage walk and crafts corner: Survey in the form of questioner by connecting to the people and asking. Questions during survey can be asked in local language but report language is English.																		
Organic farming: Collect data on organic farming in the vicinity. Like types of crop, methodology etc.,																		
Water Conservation: Report on traditional water conservation practices (to minimize wastage)																		
Food Walk: Survey local food centres and identify its specialty, Identify and study the food ingredients, Report on the regional foods, Report on Medicinal values of the local food grains, and plants.																		
<b>PEDAGOGY</b>																		
The pedagogy will include interactive lectures, inspiring talks by various departments, field visits, social immersion. Applying and synthesizing information from these sources to define the social problem with your group. Social immersion with NGOs/social sections will be a key part of the course.																		
<b>COURSE TOPICS:</b>																		
The course will introduce social context and various players in the social space, and present approaches to discovering and understanding social needs. Social immersion and inspiring conversational will culminate in developing an actual, idea for problem-based intervention, based on an in-depth understanding of a key social problem.																		
A total of 26 hrs engagement per semester for this course in 3rd semester of the B.E. program. The students will be divided into 1 group of 60 each. Each group will be handled by one faculty mentor.																		
<b>Guideline for Assessment Process:</b>																		
<b>Continuous Internal Evaluation (CIE)</b>																		
Student shall keep a separate dairy and prepare report in consultation with the mentor/s to indicate what he has observed and learned in the social connect period.																		
Report shall be handwritten or blog with paintings, sketches, poster, video and/or photograph with Geo tag.																		
The report should be signed by the mentor.																		
The report shall be evaluated on the basis of the following criteria (see Table below) and/or other relevant criteria pertaining to the activity completed.																		
Each module is evaluated for 35 Marks and final presentation will be for 15 marks.																		
<table border="1" style="width: 100%; border-collapse: collapse;"> <thead> <tr> <th style="text-align: center;">Sl. No.</th> <th style="text-align: center;">Particulars (for each module)</th> <th style="text-align: center;">Maximum Marks</th> </tr> </thead> <tbody> <tr> <td style="text-align: center;">1</td> <td>Planning and scheduling the social connect</td> <td style="text-align: center;">10</td> </tr> <tr> <td style="text-align: center;">2</td> <td>Information/Da ta collected during the social connect</td> <td style="text-align: center;">10</td> </tr> <tr> <td style="text-align: center;">3</td> <td>Report writing</td> <td style="text-align: center;">15</td> </tr> <tr> <td style="text-align: center;">4</td> <td>Final Presentation from the group</td> <td style="text-align: center;">15</td> </tr> <tr> <td></td> <td>Total</td> <td style="text-align: center;">50</td> </tr> </tbody> </table>	Sl. No.	Particulars (for each module)	Maximum Marks	1	Planning and scheduling the social connect	10	2	Information/Da ta collected during the social connect	10	3	Report writing	15	4	Final Presentation from the group	15		Total	50
Sl. No.	Particulars (for each module)	Maximum Marks																
1	Planning and scheduling the social connect	10																
2	Information/Da ta collected during the social connect	10																
3	Report writing	15																
4	Final Presentation from the group	15																
	Total	50																

**B.E COMPUTER SCIENCE & ENGINEERING**  
**Outcome Based Education (OBE) and Choice Based Credit System (CBCS)**  
**SEMESTER – III**

**UNIX & SHELL PROGRAMMING**

Course Code	S3CSA01	CIE Marks	50
Teaching Hours/Week (L:T:P)	(0:0:2)	SEE Marks	100
Credits	1	Exam Hours	1.5

**Course objectives:**

1. To execute basic unix commands using bash shell
2. To program using shell scripting
3. To program in C to utilize unix services using the system call interface

Sl. no.	<b>Experiments</b>
<b>Basic Commands</b>	
1	Simple commands, recording sessions, Files, directories, pipes, redirection, links, locating files, Archiving
2	Simple filters, grep, sed
3	Running jobs in background, job control, priority, running jobs periodically, killing processes, customising the environment
<b>Shell Scripting</b>	
1	Basic constructs – read, if, test, case, expr, while, for
2	set, shift, export, eval, exec, strings, arrays
<b>System Call Interface with GDB</b>	
1	POSIX Standards, Process creation, Process control, non local branching, process accounting, race condition, orphan process, Zombie process
2	Signals, user defined signals, timers, signal sets, masking of signals, impact of signals on non-local branching
3	Inter-process communication : pipes, semaphores, queues

**Self Study : Perl programming along with open ended problems.**

**Course outcomes:**

On successful completion of this course, students will be able :

1. To interact with Unix operating system using command interface
2. To write shell scripts for various user requirements using Unix OS programming facility
3. To write C programs to utilise the Unix OS services using system calls.

**Conduct of Practical Examination:**

- All laboratory experiments are to be included for practical examination.
- Breakup of marks and the instructions printed on the cover page of answer script to be strictly adhered by the examiners.
- Students can pick one experiment from the questions lot prepared by the examiners.
- Change of experiment is allowed only once and 20% Marks is to be deducted.

**B.E COMPUTER SCIENCE & ENGINEERING**  
**Outcome Based Education (OBE) and Choice Based Credit System (CBCS)**  
**SEMESTER – III**

**MS OFFICE AND LATEX**

Course Code	S3CSA02	CIE Marks	50
Teaching Hours/Week (L:T:P)	(0:0:2)	SEE Marks	50
Credits	1	Exam Hours	1.5

**Course objectives:**

1. Understand the basics of MS Office to prepare documents and small presentations,
2. Illustrate the features of spreadsheet/worksheet with various options.
3. Create simple presentations using templates with various options available.
4. Demonstrate the ability to apply application software in an office environment.
5. Usage of Latex tool to prepare quality documents.

Sl. no.	Experiments																																																												
1	<p>Create a document using MS-Word with at least three paragraphs and perform the following operations:</p> <ul style="list-style-type: none"> <li>With left and right margin of 0.75" and Top and Bottom margin of 1".</li> <li>Insert page number in every page.</li> <li>Centre the heading and make it bold, increase the font size.</li> <li>Underline the specified words in the document and change them to italics.</li> <li>Conduct the spell check and correct them suitably.</li> <li>Exchange paragraphs 2 and 3 using cut and paste facility.</li> <li>Put suitable headers and footers.</li> <li>Find and replace the text.</li> <li>To demonstrate Watermarking technique using image.</li> <li>Make your documents protected by a password so that nobody changes it.</li> </ul>																																																												
2	<p>Create a document using MS-Word with at least two paragraphs and also create a power point presentation with minimum two slides. Include each slide a minimum of 4 to 5 lines of text. Then perform the following operations:</p> <ul style="list-style-type: none"> <li>Count the number of words and lines in word document.</li> <li>Using mail merge facility of MS-Word send a birthday invitation to 10 of your friends.</li> <li>Insert page border and insert gutter of 1" in word document.</li> <li>Create a time table of your class in the following format in MS-Word.</li> </ul> <table border="1" style="width: 100%; text-align: center;"> <tr><td></td><td></td><td></td><td></td><td></td><td></td><td></td><td></td><td></td><td></td></tr> <tr><td></td><td></td><td></td><td></td><td></td><td></td><td></td><td></td><td></td><td></td></tr> <tr><td></td><td></td><td></td><td></td><td></td><td></td><td></td><td></td><td></td><td></td></tr> <tr><td></td><td></td><td></td><td></td><td></td><td></td><td></td><td></td><td></td><td></td></tr> <tr><td></td><td></td><td></td><td></td><td></td><td></td><td></td><td></td><td></td><td></td></tr> <tr><td></td><td></td><td></td><td></td><td></td><td></td><td></td><td></td><td></td><td></td></tr> </table> <p>• Create a hyperlink from the Power Point slide to the above time table created.</p>																																																												

	<ul style="list-style-type: none"> <li>• Create a hyperlink from word to the power point document.</li> </ul>																											
3	<p>Following is the table of scores of basketball players using MS Excel.</p> <table border="1"> <thead> <tr> <th>Players</th> <th>Team A</th> <th>Team B</th> </tr> </thead> <tbody> <tr> <td>A</td> <td>10</td> <td>11</td> </tr> <tr> <td>B</td> <td>10</td> <td>9</td> </tr> <tr> <td>C</td> <td>11</td> <td>12</td> </tr> <tr> <td>D</td> <td>13</td> <td>12</td> </tr> <tr> <td>E</td> <td>15</td> <td>15</td> </tr> <tr> <td>F</td> <td>20</td> <td>18</td> </tr> <tr> <td>Average Score</td> <td></td> <td></td> </tr> <tr> <td>Grade</td> <td></td> <td></td> </tr> </tbody> </table> <p>Using the table, perform the following operations:</p> <ul style="list-style-type: none"> <li>• Calculate the average-score of each team and assign grade for the team - if the average score of Team A is greater than Team B, then assign Grade 'A' to Team A or assign Grade 'B' to Team B.</li> <li>• Draw a Bar Chart.</li> <li>• Demonstrate Auto Format.</li> <li>• Demonstrate relative reference and absolute reference formulation.</li> </ul>	Players	Team A	Team B	A	10	11	B	10	9	C	11	12	D	13	12	E	15	15	F	20	18	Average Score			Grade

5	<p>You are asked to make a presentation about your organization to the general public. Develop the presentation as specified below:</p> <ul style="list-style-type: none"> <li>• Make a power point presentation consisting of the following 3 slides.</li> <li>• Slide 1: Your organization Name and Mission. Insert a picture either from the clipart gallery or from the library of scanned images of your organization.</li> <li>• Slide 2: Minimum 5 lines of text describing different departments in your organization. Create a word document describing the departments and give the link to the word document from this slide.</li> </ul>																											

	<ul style="list-style-type: none"> <li>• Slide 3: Create organization chart of SIT with suitable data.</li> <li>• Give transition effects to each slide with automatically advancing to next slide ( 5 Sec.).</li> <li>• Demonstrate custom animation and action buttons for the slides.</li> <li>• Show presentation.</li> </ul>
6	<p>Make a Power point presentation on any topic of your interest. Create Master Slide with suitable slide design, slide layout, background color, slide number &amp; date. Use this Master slide to demonstrate the following operations:</p> <ul style="list-style-type: none"> <li>• Give transition effects to each slide with automatically advancing to next slide (5 Sec).</li> <li>• Demonstrate how to use appropriate fonts, pictures and colors.</li> <li>• Demonstrate how to add charts and hyperlinks.</li> <li>• Demonstrate custom animations &amp; action buttons for the slides.</li> <li>• Demonstrate organization chart with suitable data.</li> <li>• Show presentation.</li> </ul>
7	<p>Create a database using MS-Access to keep track of products purchased which has the attributes as pid, pname, price, city, country. Demonstrate the following :</p> <ul style="list-style-type: none"> <li>• Creating the table.</li> <li>• Inserting suitable values into the table.</li> <li>• Creating the forms.</li> <li>• Querying the database.</li> <li>• Generating suitable reports.</li> </ul>
8	<p>Create the database of a member of the Library using MS Access having the fields like member_id, member_name, account_open_date, max_books_allowed, penalty_amount. Demonstrate the following</p> <ul style="list-style-type: none"> <li>• Creating the table.</li> <li>• Inserting suitable values into the table.</li> <li>• Creating the forms.</li> <li>• Querying the database.</li> </ul>
9	<p>Create a document using LATEX typesetting system with the following contents :</p> <ul style="list-style-type: none"> <li>• title page with author name</li> <li>• table of contents</li> <li>• header and footer</li> <li>• section containing text in paragraphs having certain words in bold ,italics, colouring &amp; foot notes</li> <li>• section containing formulae for the following <ul style="list-style-type: none"> <li>- Roots of a quadratic equation</li> <li>- Euler's number definition</li> <li>- Taylors series</li> </ul> </li> </ul>
10	<p>Create a document using LATEX typesetting system with the following contents :</p> <ul style="list-style-type: none"> <li>• section containing lists</li> <li>• numbered lists</li> <li>• unordered lists</li> <li>• section containing image with a title</li> </ul>

- |  |   |
|--|---|
|  | <ul style="list-style-type: none"><li>• section containing table to display marks of 5 students in 5 subjects</li></ul> |
|--|---|

**Course outcomes:**

On successful completion of this course, stuents will be able to:

1. Understand the basics features of MS Office tools such as MS Word, Excel, Power Point & Access and Latex tools.
2. Apply the knowledge of MS Office to solve given problems.
3. Apply the knowledge of Latex tool to prepare quality documentation.

**Conduct of Practical Examination:**

- All laboratory experiments are to be included for practical examination.
- Breakup of marks and the instructions printed on the cover page of answer script to be strictly adhered by the examiners.
- Students can pick one experiment from the questions lot prepared by the examiners.
- Change of experiment is allowed only once and 20% Marks is to be deducted.

<b>B.E COMPUTER SCIENCE &amp; ENGINEERING</b> <b>Outcome Based Education (OBE) and Choice Based Credit System (CBCS)</b> <b>SEMESTER – III</b>			
<b>ETHICS &amp; PUBLIC POLICY FOR AI</b>			
Course Code	S3CSA04	CIE Marks	100
Teaching Hours/Week (L:T:P)	(0:0:2)	SEE Marks	-
Credits	1	Exam Hours	1.5
<b>Course objectives:</b>			
<ul style="list-style-type: none"> <li>• To understand Ethical Framework for a Good AI Society, establishing Rules for trustworthy AI</li> <li>• To Designing ethics for good society</li> <li>• To familiar with Tools, methods and practices for designing AI for social good</li> <li>• To familiar with Innovation and future AI</li> <li>• To understand the Case Study: Ai in health care, knowing Regulation and Governance of AI ethics</li> </ul>			
<b>Teaching-Learning Process (General Instructions)</b> These are sample Strategies, which teachers can use to accelerate the attainment of the various course outcomes. 1. Chalk and Talk 2. Real time Examples 3. Natural Approaches			
<b>Module-1</b> An Ethical Framework for a Good AI Society: opportunities, Risks, principles and Recommendations. Establishing the rules for building trustworthy AI Textbook1: Chapter 3, chapter 4			
<b>Module-2</b> How to design AI for social good: seven essential factors From What to How: An Initial Review of publicly available AI Ethics tools, Methods and Research to Translate principles into Practices Textbook1: Chapter 9, Chapter 10			
<b>Module-3</b> How to design AI for social good: seven essential factors From What to How: An Initial Review of publicly available AI Ethics tools, Methods and Research to Translate principles into Practices Textbook1: Chapter 9, Chapter 10			
<b>Module-4</b> Innovating with Confidence: Embedding AI Governance and fairness in financial Services Risk management framework, What the near future of AI could be. Textbook1: Chapter 20, chapter 22			
<b>Module-5</b> <span style="float: right;"><b>(4Hrs)</b></span> Human-AI Relationship, AI and Workforce, Autonomous Machines and Moral Decisions, AI in HealthCare: balancing Progress and Ethics, Regulation and Governance of AI Ethics Textbook2 : Chapter 5,Chapter 8, Chapter 9			
<b>Course outcome (Course Skill Set)</b> At the end of the course, the student will be able to : 1. Describe Ethical Framework for a Good AI Society, establishing Rules for trustworthy AI 2. Explain ethics for good society 3. Illustrate various Tools, methods and practices for designing AI for social good 4. Describe the Innovation and future AI 5. Illustrate Regulation and Governance of AI ethics in Healthcare domain.			

**Assessment Details** (both CIE and SEE) The weightage of Continuous Internal Evaluation (CIE) is 50% and for Semester End Exam (SEE) is 50%. The minimum passing mark for the CIE is 40% of the maximum marks (20 marks out of 50) and for the SEE minimum passing mark is 35% of the maximum marks (18 out of 50 marks). A student shall be deemed to have satisfied the academic requirements and earned the credits allotted to each subject/ course if the student secures a minimum of 40% (40 marks out of 100) in the sum total of the CIE (Continuous Internal Evaluation) and SEE (Semester End Examination) taken together.

**Continuous Internal Evaluation:**

- For the Assignment component of the CIE, there are 25 marks and for the Internal Assessment Test component, there are 25 marks.
- The first test will be administered after 40-50% of the syllabus has been covered, and the second test will be administered after 85-90% of the syllabus has been covered
- Any two assignment methods mentioned in the 22OB2.4, if an assignment is project-based then only one assignment for the course shall be planned. The teacher should not conduct two assignments at the end of the semester if two assignments are planned.
- For the course, CIE marks will be based on a scaled-down sum of two tests and other methods of assessment.

**Internal Assessment Test question paper is designed to attain the different levels of Bloom's taxonomy as per the outcome defined for the course.**

**Semester-End Examination:** Theory SEE will be conducted by University as per the scheduled timetable, with common question papers for the course (duration 03 hours). 1. The question paper will have ten questions. Each question is set for 20 marks. 2. There will be 2 questions from each module. Each of the two questions under a module (with a maximum of 3 sub-questions), should have a mix of topics under that module. 3. The students have to answer 5 full questions, selecting one full question from each module. 4. Marks scored shall be proportionally reduced to 50 marks.

**Suggested Learning Resources:**

**Books**

1. "Ethics, governance and Policies in Artificial Intelligence", Author-Editor : Luciano Floridi, Springer, 1st Edition 2021, vol 144, Oxford Internet Institute, University of ixford, UK, ISSN 0921-8599, e-ISSN 2542- 8349 Philosophical Studies series, ISBN 978-3-030-81906-4 e-ISBN 978-3-030-81907-1, [://doi.org/https://doi.org/10.1007/978-3-030-81907-1](https://doi.org/https://doi.org/10.1007/978-3-030-81907-1), 2021.

# **Scheme of Teaching, Examination and Syllabus**

## **B.E. COMPUTER SCIENCE & ENGINEERING**

Batch: 2022-23

**IV SEMESTER**  
(Effective from the academic year 2023-2024)

<b>B.E COMPUTER SCIENCE &amp; ENGINEERING</b> <b>Outcome Based Education (OBE) and Choice Based Credit System (CBCS)</b> <b>SEMESTER – IV</b>			
<b>DESIGN AND ANALYSIS OF ALGORITHMS</b>			
Course Code	S4CCS01	CIE Marks	50
Teaching Hours/Week (L:T:P)	(3:0:0)	SEE Marks	50
Credits	3	Exam Hours	3
<b>Course objectives:</b> <ol style="list-style-type: none"> <li>1. An introduction to the design and analysis of algorithms. (Synthesis)</li> <li>2. Expose students to prove the correctness and analyse the running time of the basic algorithms. (Analysis)</li> <li>3. To compare the running time of sorting and searching algorithms. (Comprehension)</li> <li>4. Create an awareness of applying the algorithms and design techniques to solve problems. (application)</li> </ol>			
<b>Module-1</b>			<b>(08hrs)</b>
Introduction: Notion of algorithm, Fundamentals of Algorithmic Problem Solving, Fundamentals of the Analysis of Algorithm Efficiency: Analysis frame work, Asymptotic Notations and Basic Efficiency Classes, Mathematical Analysis of Non-recursive and Recursive Algorithms. [Chapters: 1.1, 1.2, 2.1-2.4]			
<b>Module-2</b>			<b>(07 hrs)</b>
<b>Brute Force:</b> Selection Sort and Bubble Sort, Sequential Search and Brute-Force String Matching. <b>Divide and Conquer:</b> Mergesort, Quicksort, Binary Search. [Chapters: 3.1, 3.2, 4.1- 4.3]			
<b>Module-3</b>			<b>(08hrs)</b>
<b>Decrease and Conquer:</b> Insertion Sort, Depth First Search, Breadth First Search, Topological Sorting, Algorithms for Generating Combinatorial Objects. <b>Transform and Conquer:</b> Presorting, Balanced Search Trees: AVL Tree, Heaps and Heapsort. [Chapters: 5.1 – 5.4, 6.1, 6.3 (only AVL Trees), 6.4] <b>Self Study :</b> Algorithms for Generating Combinatorial Objects.			
<b>Module-4</b>			<b>(08hrs)</b>
<b>Dynamic Programming:</b> Computing a Binomial Coefficient, Warshall's and Floyd's Algorithms, The Knapsack Problem. <b>Greedy Technique:</b> Prim's Algorithm, Kruskal's Algorithm, Dijkstra's Algorithm. [Chapters: 8.1, 8.2, 8.4, 9.1-9.3]			
<b>Module-5</b>			<b>(09hrs)</b>
<b>Space and Time Tradeoffs:</b> Sorting by Counting, Input Enhancement in String Matching: Horspool's Algorithm. <b>Limitations of Algorithm Power:</b> P, NP and NP-Complete Problems. <b>Coping with the Limitations of Algorithm Power: Backtracking:</b> N-Queens, Hamiltonian Circuit Problem, Subset-Sum Problem. [Chapters: 7.1, 7.2, 10.3, 11.1] <b>Self Study :</b> Limitations of Algorithm Power: P, NP and NP-Complete Problems.			

**Course outcomes:**

On successful completion of this course, students will be able to:

1. Discuss the fundamental principles of analysis and design of algorithms.
2. Apply design techniques such as Brute -Force, Divide-and-Conquer, Decrease-and-Conquer, Transform-and-Conquer, Greedy, Dynamic programming, space & time trade-off and Backtracking to solve a given problem.
3. Design/Outline algorithms classified under different design techniques.
4. Analyse the complexity of a given algorithm.

**Question paper pattern:**

- The question paper will have ten full questions carrying equal marks.
- Each full question will be for 20 marks.
- There will be two full questions (with a maximum of four sub- questions) from each module.
- Each full question will have sub- question covering all the topics under a module.
- The students will have to answer five full questions, selecting one full question from each module.

<b>B.E COMPUTER SCIENCE &amp; ENGINEERING</b> <b>SEMESTER - IV</b> <b>MICROCONTROLLER AND EMBEDDED SYSTEMS</b>			
Course Code	S4CCSI01	CIE Marks	50
Teaching Hours/Week (L:T:P)	(3:0:2)	SEE Marks	50
Credits	4.0	Exam Hours	3
<b>Course objectives:</b>			
This Course will enable students to:			
<ol style="list-style-type: none"> <li>1. Introduce the concept of architecture and programming of advanced embedded microcontrollers.</li> <li>2. ARM family of microcontrollers that are widely used in design of real time sophisticated embedded systems like tablets, hand held devices, automation and industrial control systems.</li> <li>3. It also covers writing Embedded C programming of LPC2148 for GPIO, ADC, DAC, UART, LCD, Timers.</li> <li>4. It also explains the concepts of embedded system and its components.</li> </ol>			
<b>Module-1</b>			<b>(08L+4P)</b>
<b>CHAPTER 1-EMBEDDED SYSTEM COMPONENTS:</b> Embedded v/s General computing system, Classification of Embedded systems, Major applications and purpose of Embedded systems, Core of an Embedded System including all types of Processors, Controller and Memory.			
<b>CHAPTER 2-ARM EMBEDDED SYSTEMS:</b> The RISC Design Philosophy, The ARM Design Philosophy, Embedded System Hardware, Embedded System Software.			
Text book 2, Chapter1: 1.1, 1.2, 1.4, 1.5, 1.6. Chapter2: 2.1, 2.2.			
Text book 1: Chapter1: 1.1- 1.4.			
<b>Module-2</b>			<b>(8L+4P)</b>
<b>CHAPTER 3-ARM PROCESSOR FUNDAMENTALS:</b> Registers, Current Program Status Register, Pipeline, Exceptions, Interrupts, and Vector Table Core Extensions, Architecture Revisions, ARM Processor Families, LPC2148 Microcontroller Architecture, LPC2148 Microcontroller Architecture, Memory Mapping, Register Description.			
Text book 1: Chapter 2: 2.1-2.7.			
<b>Module-3</b>			<b>(8L + 6P)</b>
<b>CHAPTER 4-INTRODUCTION TO THE ARM INSTRUCTIONS SET:</b> Data Processing Instructions and examples, Branch Instructions and examples, Load-Store Instructions and examples, Software Interrupt Instructions and examples, Program Status Register Instruction and examples. Programs: Addition, Multiplication, division and Subtraction of 16, 32-bit data, Example Programs: Looping, conditional programs like sum of memory elements, Loading Constants, Conditional Execution, and Example Programs.			
Text book1, Chapter3: 3.1-3.5.			
<b>Module-4</b>			<b>(8L+6P)</b>
<b>CHAPTER 5-INTERFACING</b> Sensors, Actuators, GPIO, LED interfacing and programming in C, 7 segment display interfacing and C program, stepper motor interfacing, Keyboard interfacing, Push button switch interfacing and programming in C.			
Text book 2, Chapter2:2.3- 2.3.1, 2.3.2, 2.3.3-2.3.3.1, 2.3.3.2, 2.3.3.3, 2.3.3.4, 2.3.3.7, 2.3.3.8.			
<b>Module-5</b>			<b>(8L+6P)</b>
<b>INTERFACING Cont...</b> Data Conversions (ADC, DAC) interfacing and C program, Timers, Counters, Communication Protocols: UART, I2C (on board) SPI, CAN Programs using C			

**Course outcomes:**

On successful completion of this course, students will be able to:

1. Analyze the fundamental concept of Embedded System Architecture.
2. Understand and analyze the ARM processor architecture and its family.
3. Develop assembly language programs to perform specific tasks using ARM instructions.
4. Design and develop embedded C programs to interface external hardware with LPC214x microcontroller.
5. Design and develop the solutions for a problem using embedded system and demonstrate.

**Question paper pattern:**

- The question paper will have ten full questions carrying equal marks.
- Each full question will be for 20 marks.
- There will be two full questions (with a maximum of four sub- questions) from each module.
- Each full question will have sub- question covering all the topics under a module.
- The students will have to answer five full questions, selecting one full question from each module.

2	ARM ASSEMBLY LANGUAGE Fundamentals and Techniques	William Hohl, Christopher	CRC Press	Second Edition, 2015
3	ARM Assembly Language an Introduction	Gibson	John Wiley & Sons	Second Edition, 2007

**Integrated Lab Syllabus****Course objectives:**

This Course will enable students to:

1. Develop and test assembly language programs (ALP) using ARM7TDMI/LPC2148
2. Conduct the experiments on ARM7TDMI/LPC2148 evaluation board using evaluation version of Keil µvision tool.

Sl. no.	Programs
<b>PART A</b>	
Conduct the following experiments by developing Assembly Language Program (ALP) for LPC2148 using Keil µvision-5 tool.	
1	Develop an ALP to add two 64-bit numbers.
2	Develop an ALP to find the sum of first $n$ natural numbers.

3	Develop an ALP to find the factorial of a non-zero number using subroutine.
4	Develop an ALP to add an array of $n$ numbers.
5	Develop an ALP to find the square of a number (0-10) using Look-up table.
6	Develop an ALP to find the largest number in an array of 32-bit signed integers.
7	Develop an ALP to arrange a series of 32-bit unsigned numbers in ascending order.
8	Develop an ALP to count the number of ones and zeroes in two consecutive memory locations.

### **PART B**

Conduct the following experiments on LPC2148 evaluation board by developing embedded C program using Keil µvision-5 and Flash Magic tools.

1	Develop an embedded C program to display the Hex digits 0 to F on a Seven-Segment display interface with an appropriate delay in between.
2	Develop an embedded C program to drive a Stepper motor Interface to rotate the motor in clockwise direction.
3	Develop an embedded C program to read the status of 8 input bits from the Logic Controller Interface and display 'FF' if it is even parity bits otherwise display 00. Also display number of 1's in the input data.
4	Develop an embedded C program to display "Hello World" message on a 2x16 character LCD interface.
5	Develop an embedded C program to generate triangular and square waveforms using the DAC Interface. (The output of the DAC is to be displayed on the CRO).
6	Develop an embedded C program to display the message "dEPt OF CSE" from right to left and left to right on a Seven Segment display interface.
7	Develop an embedded C program to drive a Stepper motor Interface to rotate the motor in anti-clockwise direction.
8	Develop an embedded C program to generate Half-rectified Sine waveform using DAC interface.

#### **Course outcomes:**

On successful completion of this course, students will be able to:

1. Summarize ARM instruction sets and comprehend the knowledge of how assembly language works.
2. Design and develop ARM assembly language programs using Keil tool.
3. Infer functioning of hardware devices and interfacing them to ARM microcontroller.
4. Design and develop embedded C code for interfacing different modules with ARM microcontroller using Keil and Flash Magic tools.

<b>B.E COMPUTER SCIENCE &amp; ENGINEERING</b> <b>Outcome Based Education (OBE) and Choice Based Credit System (CBCS)</b> <b>SEMESTER – IV</b>			
<b>THEORY OF COMPUTATIONS</b>			
Course Code	S4CCSI02	CIE Marks	50
Teaching Hours/Week (L:T:P)	(3:0:2)	SEE Marks	50
Credits	4	Exam Hours	3
<b>Course objectives:</b> This Course will enable students to: 1. <b>Explain</b> the concepts of automata theory and formal languages(Comprehension) 2. <b>Identify</b> different formal language classes like regular and context free and their relationships (Knowledge) 3. <b>Design</b> grammars and recognizers for different formal languages(Synthesis) 4. <b>Analyze</b> and modify the CFGs to normal forms. (Analysis) 5. <b>Demonstrate</b> the equivalence between various language recognizers. (Application) 6. <b>Describe</b> Turing machine and its variants. (Comprehension)			
<b>Module-1</b> <span style="float: right;"><b>(8L hrs)</b></span> Introduction to Finite Automata: Why study automata theory? The central concepts of Automata theory; Deterministic finite automata; Nondeterministic finite automata; Finite automata with Epsilon-transitions. (Text Book: 1.1.1, 1.5, 2.2, 2.3.1-2.3.5, 2.5)			
<b>Module-2</b> <span style="float: right;"><b>(8L hrs)</b></span> <b>Regular expressions and Languages:</b> Regular expressions, Finite Automata and Regular Expressions- From DFA's to Regular Expressions, converting regular expressions to automata; <b>Properties of Regular languages-</b> Equivalence and Minimization of Automata - Testing equivalence of states, Testing equivalence of regular languages, Minimization of DFA's. (Text Book: 3.1, 3.2.1, 3.2.3,4.4.1-4.4.3)			
<b>Module-3</b> <span style="float: right;"><b>(8L hrs)</b></span> <b>Context-Free Grammars and Languages:</b> Context-free grammars; Parse trees- Constructing Parse Trees, The yield of a parse tree; Ambiguity in grammars and languages- Ambiguous grammars, Leftmost derivation as a way to express ambiguity, Inherent ambiguity. Normal forms for CFGs, Eliminating useless symbols, Computing reachable symbols, eliminating $\epsilon$ productions and unit productions, Chomsky normal form.(Text Book:5.1, 5.2.1, 5.2.2,5.4.1,5.4.3,5.4.4,7.1)			
<b>Module-4</b> <span style="float: right;"><b>(8L hrs)</b></span> <b>Pushdown Automata:</b> Definition of the Pushdown automata; The languages of a PDA, Acceptance by Final State, Acceptance by Empty Stack, From Empty Stack to Final State, From Final State to Empty Stack, Deterministic Pushdown Automata- Definition of a DPDA. (Text Book:6.1, 6.2, 6.4.1)			
<b>Module-5</b> <span style="float: right;"><b>(8L hrs)</b></span> <b>Introduction to Turing Machine:</b> The Turing Machine: Notation for the TM, Instantaneous Descriptions for the TM, Transition diagrams for the TM, The Language of a TM, TM and Halting, Multitape Turing machines, Restricted Turing machines: Turing machines with Semi-infinite tapes, Multistack machines . (Text Book:8.2.2 - 8.2.6, 8.4.1, 8.5.1,8.5.2)			

**Course outcomes:**

After the completion of this course, students will be able to:

- **Describe and Design** the various forms of finite automata for a given regular language.
- **Describe and Design** an equivalent regular expression for a given regular language and also **Identify** the equivalence between the various representations of the finite automata.
- **Describe and Design** the context free grammars for a given context free language and also **Apply** Chomsky normal form to normalize them to a standard form.
- **Describe and Design** various types of push down automata for a given language and **Show** their equivalence.
- **Describe and Design** Turing machine for a given language and also **Explain** its variants like Multitape and Multistack turing machines.

**Question paper pattern:**

- The question paper will have ten full questions carrying equal marks.
- Each full question will be for 20 marks.
- There will be two full questions (with a maximum of four sub- questions) from each module.
- Each full question will have sub- question covering all the topics under a module.
- The students will have to answer five full questions, selecting one full question from each module.

Simulation of various automata for a given language using JFLAP/any equivalent simulator. <b>6 Hrs</b>				

**B.E COMPUTER SCIENCE & ENGINEERING**  
**Outcome Based Education (OBE) and Choice Based Credit System (CBCS)**  
**SEMESTER - IV**

**DESIGN AND ANALYSIS OF ALGORITHMS LABORATORY**

Course Code	S4CCSL01	CIE Marks	50
Teaching Hours/Week (L:T:P)	(0:0:2)	SEE Marks	50
Credits	1	Exam Hours	3 Hours

**Course objectives:**

1. An introduction to the design and analysis of algorithms. (Synthesis)
2. Expose students to prove the correctness and analyse the running time of the basic algorithms. (Analysis)
3. To compare the running time of sorting and searching algorithms. (Comprehension)
4. Create an awareness of applying the algorithms and design techniques to solve problems. (application)

Sl. no.	Experiments
	<b>Note:</b> C/C++ language must be used to develop the following programs:
1	Use divide and conquer method to recursively find the maximum and minimum elements in a given list of $n$ elements
2	Sort a given set of elements using the Merge sort method and determine the time required to sort the elements. Repeat the experiment for different values of $n$ , the number of elements in the list to be sorted and plot a graph of the time taken versus $n$ . The elements can be read from a file or can be generated using the random number generator.
3	Sort a given set of elements using the Quick sort method and determine the time required to sort the elements. Repeat the experiment for different values of $n$ , the number of elements in the list to be sorted and plot a graph of the time taken versus $n$ . The elements can be read from a file or can be generated using the random number generator.
4	Obtain the Topological ordering of vertices in a given digraph.
5	Print all the nodes reachable from a given starting node in a given digraph using Depth First Search method.
6	Print all the nodes reachable from a given starting node in a digraph using Breadth First Search method.
7	Sort a given set of elements using the Heap sort method and determine the time required to sort the elements. Repeat the experiment for different values of $n$ , the number of elements in the list to be sorted and plot a graph of the time taken versus $n$ . The elements can be read from a file or can be generated using the random number generator.
8	Implement Horspool algorithm for String Matching.
9	Implement 0/1 Knapsack problem using dynamic programming.
10	a. Implement All Pair Shortest paths problem using Floyd's algorithm. b. Compute the transitive closure of a given directed graph using Warshall's algorithm.
11	From a given vertex in a weighted connected graph, find shortest paths to other vertices using Dijkstra's algorithm.
12	Find Minimum Cost Spanning Tree of a given undirected graph using Prims algorithm.

13	Find Minimum Cost Spanning Tree of a given undirected graph using Kruskal's algorithm
14	Find a subset of a given set $S=\{s_1, s_2, \dots, s_n\}$ of $n$ positive integers whose sum is equal to a given positive integer $d$ . For example, if $S= \{1, 2, 5, 6, 8\}$ and $d = 9$ there are two solutions $\{1,2,6\}$ and $\{1,8\}$ . A suitable message is to be displayed if the given problem instance doesn't have a solution.
15	Implement N Queen's problem using Back Tracking.
<b>Course outcomes:</b>	
On successful completion of this course, students will be able to:	
<ol style="list-style-type: none"> <li><b>Design/Develop</b> a solution for the given problem using appropriate design techniques such as brute-force, greedy, dynamic programming, divide and conquer, decrease and conquer, transform and conquer and backtracking.</li> <li><b>Analyse</b> the efficiency of sorting algorithms with respect to time and space complexity.</li> <li><b>Apply</b> various algorithmic design techniques to solve real world problems.</li> </ol>	
<b>Conduct of Practical Examination:</b>	
<ul style="list-style-type: none"> <li>All laboratory experiments are to be included for practical examination.</li> <li>Breakup of marks and the instructions printed on the cover page of answer script to be strictly adhered by the examiners.</li> <li>Students can pick one experiment from the questions lot prepared by the examiners.</li> <li>Change of experiment is allowed only once and 20% Marks is to be deducted.</li> </ul>	

**B.E COMPUTER SCIENCE & ENGINEERING**  
**OUTCOME BASED EDUCATION (OBE) AND CHOICE BASED CREDIT SYSTEM (CBCS)**  
**SEMESTER - III**

**DISCRETE MATHEMATICAL STRUCTURES**

Course Code	S4CCS03	CIE Marks	50
Teaching Hours/Week (L:T:P)	(3:0:0)	SEE Marks	50
Credits	3	Exam Hours	03

**Course objectives:**

1. To identify the domain and range of a relation and their properties.
2. To understand the basics of groups and its associated concepts.
3. To understand the theory of Boolean algebra and normalize a switching circuit.
4. Identify types of graphs, outline properties of graphs
5. To understand tree structure and its properties.

**Module-1 (08 hrs)**

**Relations and Function:** Relations, Properties of Relations, Computer Recognition- Zero-One Matrices and Digraphs, Partial order relation -Poset and Hasse-Diagrams, Equivalence Relation and Partitions, Extremal elements of a Poset, Lattice.

**Module-2 (08 hrs)**

**Groups:** Binary Operations and Properties, Definition of a Group, Examples and Elementary properties, Abelian Group, Homomorphism, Isomorphism and Cyclic Groups, Cosets and Lagrange's Theorem, Normal subgroups.

**Module-3 (07 hrs)**

**Boolean Algebra and Switching Functions:** Introduction, Definition of Boolean algebra and Boolean function, Laws of Boolean functions and problems Switching functions: Disjunctive and conjunctive normal forms. Structure of Boolean Algebra.

**Module-4 (08 hrs)**

**Introduction to Graph Theory:** Definitions and Examples, Subgraphs, Complements, and Graph Isomorphism, Vertex Degree, Euler Trails and Circuits, Planar Graphs, Hamilton Paths and Cycles

**Module-5 (09 hrs)**

**Graph Coloring and Trees:** Graph Coloring, and Chromatic Polynomials. **Trees:** Definitions, Properties, and Examples, Rooted Trees, Trees and Sorting, Weighted Trees and Prefix Codes. Minimal spanning Tree, Transport Networks: Max-Flow Min-cut Theorem.

**Course outcomes:**

On successful completion of this course, students will be able to:

1. Evaluate zero-one matrix, composition of relations and draw Hasse diagram (L3).
2. Apply the concept of groups and subgroup to verify Lagrange's theorem. (L2).
3. Apply the theory of Boolean algebra to minimize switching functions (L3).
4. Recognize types of graphs, outline properties of graphs, understand isomorphism and apply to some practical problems. (L2/ L3).
5. Color the vertices/ edges of a graph, understand tree structure and its properties. Determine the shortest path and apply to practical problems(L2/L3).

**Question paper pattern:**

- The question paper will have ten full questions carrying equal marks.
- Each full question will be for 20 marks.
- There will be two full questions (with a maximum of four sub- questions) from each module.
- Each full question will have sub- question covering all the topics under a module.
- The students will have to answer five full questions, selecting one full question from each module.

<b>Module-1</b>	<b>(08Hrs)</b>					
<b>Introduction to Graph Theory:</b> Definitions and Examples, Subgraphs, Complements, and Graph Isomorphism, Vertex Degree, Euler Trails and Circuits, Planar Graphs, Hamilton Paths and Cycles						
<b>Module-2</b>	<b>(08Hrs)</b>					
<b>Introduction to Graph Theory contd.:</b> Graph Colouring, and Chromatic Polynomials.						
<b>Trees:</b> Definitions, Properties, and Examples, Rooted Trees, Trees and Sorting, Weighted Trees and Prefix Codes. Minimal spanning Tree, Transport Networks: Max-Flow Min-cut Theorem, Matching						
<b>Module-3</b>	<b>(08Hrs)</b>					
<b>Fundamental Principles of Counting:</b> The Rules of Sum and Product, Permutations(linear, circular, identical objects), Combinations – The Binomial Theorem, Combinations with Repetition, The Catalon Numbers.						
<b>The Principle of Inclusion and Exclusion:</b> The Principle of Inclusion and Exclusion, Generalizations of the Principle.						
<b>Module-4</b>	<b>(08Hrs)</b>					
<b>Derangements</b> – Nothing is in its Right Place, Rook Polynomials. <b>Generating Functions:</b> Introductory Examples, Definition and Examples – Calculational Techniques, Partitions of Integers. The Exponential Generating Function, The Summation Operator.						
<b>Module-5</b>	<b>(08Hrs)</b>					
<b>Recurrence Relations:</b> First Order Linear Recurrence Relation, The Second Order Linear Homogeneous, Recurrence Relation with Constant Coefficients, The Non-homogeneous Recurrence Relation, The Method of Generating Functions.						

**Course outcomes:**

On successful completion of this course, students will be able to:

- Identify types of graphs, outline properties of graphs, describe when the graphs are said to be same even though the shapes are different (isomorphism) and apply to some practical problems like seven bridge problem, traveling sales man problem.
- Describe how to color the vertices/ edges of a graph, apply graph coloring in map coloring, describe what is a tree and its properties and apply the concept of trees in constructing optimal prefix codes. Determine the shortest path between two vertices, write algorithms for finding minimal spanning trees and apply the concepts in transport network.
- Apply the techniques of counting to identify the number of ways in which a given task can be accomplished without list all the possibilities explicitly.
- Identify the different physical situations in which principle of inclusion and exclusion can be used for counting.
- Derive the generating function for the given situation and evaluate the required coefficient. Solve the recurrence relation and interpret the solution.

**Question paper pattern:**

- The question paper will have ten full questions carrying equal marks.
- Each full question will be for 20 marks.
- There will be two full questions (with a maximum of four sub- questions) from each module.
- Each full question will have sub- question covering all the topics under a module.
- The students will have to answer five full questions, selecting one full question from each module.

4. To develop an ability to use algorithms for approximation problems w.r.t Linear Algebraic equations
5. To develop an ability to use algorithms for approximation problems w.r.t Finite element methods

**Module-1 (08L)**

Numerical Differentiation and Integration Introduction, Numerical Differentiation, Numerical Integration, Euler-Maclaurin Formula, Adaptive Quadrature Methods, Gaussian Integration, Singular Integrals, Fourier Integrals, Numerical Double Integration

**Module-2 (07L)**

Numerical Solution of Ordinary Differential Equations Introduction, Solution by Taylor's Picard's Method, Euler's Method, Runge-Kutta Methods, Predictor-Corrector Methods, the Cubic Spline Method, Simultaneous and Higher Order Equations, Boundary Value Problems: Finite-Difference Method, The Shooting Method

**Module-3 (08L)**

Numerical Solution of Partial Differential Equations Introduction, Finite-Difference Approximations, Laplace's Equation: Jacobi's Method, Gauss-Seidel Method, SOR Method, ADI Method, Parabolic Equations, Iterative Methods, Hyperbolic Equations. . .

**Module-4 (08L)**

System of Linear Algebraic Equations Introduction, Solution of Centro-symmetric Equations, Direct Methods, LU- Decomposition Methods, Iterative Methods, III-conditioned Linear Systems.

**Module-5 (08L)**

The Finite Element Method: Functionals- Base Function Methods of Approximation- The Rayleigh – Ritz Method –The Galerkin Method, Application to two dimensional problemsFinite element Method for one and two dimensional problems.

**Course outcomes:**

On successful completion of this course, students will be able to:

1. Assess the approximation techniques to formulate and apply appropriate strategy to solve real world problems.
2. Evaluate the accuracy of numerical methods for Differentiation and Integration
3. Evaluate the accuracy of numerical methods for Differential equation
4. Evaluate the accuracy of numerical methods for Partial Differential equation
5. Evaluate the accuracy of numerical methods for Linear Algebraic Equations
6. Evaluate the accuracy of numerical methods for Finite Element Method

**Question paper pattern:**

- The question paper will have ten full questions carrying equal marks.
- Each full question will be for 20 marks.
- There will be two full questions (with a maximum of four sub- questions) from each module.
- Each full question will have sub- question covering all the topics under a module.
- The students will have to answer five full questions, selecting one full question from each module.

Sl. No.	Title of the Book	Name of the Author/s	Name of the Publisher	Edition and Year
<b>Textbook</b>				
1	Numerical Methods	Balagurusamy, E.,	Tata McGraw –Hill	978-0074633113 Standard Edition, July 2017
<b>Reference Book</b>				
1	Numerical Analysis and Algorithms	Niyogi, Pradip	Tata McGraw –Hill	978-0070494930 2003

**B.E COMPUTER SCIENCE & ENGINEERING**  
**OUTCOME BASED EDUCATION (OBE) AND CHOICE BASED CREDIT SYSTEM (CBCS)**  
**SEMESTER - IV**

**BIOLOGY FOR ENGINEERS**

Course Code	S4CCB01	CIE Marks	50
Teaching Hours/Week (L:T:P)	(3:0:0)	SEE Marks	50
Credits	3	Exam Hours	03

**Course objectives:**

1. To familiarize the students with the basic biological concepts and their engineering applications.
2. To enable the students with an understanding of biodesign principles to create novel devices and structures.
3. To provide the students an appreciation of how biological systems can be re-designed as substitute products for natural systems.
4. To motivate the students to develop interdisciplinary vision of biological engineering..

**Teaching-Learning Process (General Instructions)**

These are sample Strategies, which teachers can use to accelerate the attainment of the various course outcomes.

- Explanation via real life problem, situation modelling, and deliberation of solutions, hands-on sessions, reflective and questioning /inquiry-based teaching.
- Instructions with interactions in classroom lectures (physical/hybrid).
- Use of ICT tools, including YouTube videos, related MOOCs, AR/VR/MR tools.
- Flipped classroom sessions (~10% of the classes).
- Industrial visits, Guests talks and competitions for learning beyond the syllabus.
- Students' participation through audio-video based content creation for the syllabus (as assignments).
- Use of gamification tools (in both physical/hybrid classes) for creative learning outcomes.
- Students' seminars (in solo or group) /oral presentations.

**Module-1**

**(08 hrs)**

**INTRODUCTION TO BIOLOGY:**

The cell: the basic unit of life, Structure and functions of a cell. The Plant Cell and animal cell, Prokaryotic and Eukaryotic cell, Stem cells and their application. Biomolecules: Properties and functions of Carbohydrates, Nucleic acids, proteins, lipids. Importance of special biomolecules; Enzymes (Classification (with one example each), Properties and functions), vitamins and hormones.

**Module-2**

**(08 hrs)**

**BIOMOLECULES AND THEIR APPLICATIONS (QUALITATIVE):**

Carbohydrates (cellulose-based water filters, PHA and PLA as bioplastics), Nucleic acids (DNA Vaccine for Rabies and RNA vaccines for Covid19, Forensics – DNA fingerprinting), Proteins (Proteins as food – whey protein and meat analogs, Plant based proteins), lipids (biodiesel, cleaning agents/ detergents), Enzymes (glucose-oxidase in biosensors, lignolytic enzyme in bio-bleaching).

**Module-3**

**(08 hrs)**

**HUMAN ORGAN SYSTEMS AND BIO DESIGNS (QUALITATIVE):**

Brain as a CPU system (architecture, CNS and Peripheral Nervous System, signal transmission, EEG, Robotic arms for prosthetics. Engineering solutions for Parkinson's disease). Eye as a Camera system (architecture of rod and cone cells, optical corrections, cataract, lens materials,

bionic eye). Heart as a pump system (architecture, electrical signalling - ECG monitoring and heart related issues, reasons for blockages of blood vessels, design of stents, pace makers, defibrillators). Lungs as purification system (architecture, gas exchange mechanisms, spirometry, abnormal lung physiology - COPD, Ventilators, Heart-lung machine). Kidney as a filtration system (architecture, mechanism of filtration, CKD, dialysis systems).

**Module-4 (08 hrs)**

**NATURE-BIOINSPIRED MATERIALS AND MECHANISMS (QUALITATIVE):**

Echolocation (ultrasonography, sonars), Photosynthesis (photovoltaic cells, bionic leaf). Bird flying (GPS and aircrafts), Lotus leaf effect (Super hydrophobic and self-cleaning surfaces), Plant burrs (Velcro), Shark skin (Friction reducing swim suits), Kingfisher beak (Bullet train). Human Blood substitutes-hemoglobin-based oxygen carriers (HBOCs) and perflourocabons (PFCs).

**Module-5 (08 hrs)**

**TRENDS IN BIOENGINEERING (QUALITATIVE):**

Muscular and Skeletal Systems as scaffolds (architecture, mechanisms, bioengineering solutions for muscular dystrophy and osteoporosis), scaffolds and tissue engineering, Bioprinting techniques and materials, 3D printing of ear, bone and skin. 3D printed foods. Electrical tongue and electrical nose in food science, DNA origami and Biocomputing, Bioimaging and Artificial Intelligence for disease diagnosis. Self-healing Bioconcrete (based on bacillus spores, calcium lactate nutrients and biomineratization processes) and Bioremediation and Biomining via microbial surface adsorption (removal of heavy metals like Lead, Cadmium, Mercury, Arsenic).

**Course outcomes:**

On successful completion of this course, students will be able to:

1. Elucidate the basic biological concepts via relevant industrial applications and case studies.
2. Evaluate the principles of design and development, for exploring novel bioengineering projects.
3. Corroborate the concepts of biomimetics for specific requirements.
4. Think critically towards exploring innovative biobased solutions for socially relevant problems.

**Assessment Details (both CIE and SEE)**

The weightage of Continuous Internal Evaluation (CIE) is 50% and for Semester End Exam (SEE) is 50%. The minimum passing mark for the CIE is 40% of the maximum marks (20 marks out of 50) and for the SEE minimum passing mark is 35% of the maximum marks (18 out of 50 marks). A student shall be deemed to have satisfied the academic requirements and earned the credits allotted to each subject/ course if the student secures a minimum of 40% (40 marks out of 100) in the sum total of the CIE (Continuous Internal Evaluation) and SEE (Semester End Examination) taken together.

**Continuous Internal Evaluation:**

- For the Assignment component of the CIE, there are 25 marks and for the Internal Assessment Test component, there are 25 marks.
- The first test will be administered after 40-50% of the syllabus has been covered, and the second test will be administered after 85-90% of the syllabus has been covered
- Any two assignment methods mentioned in the 22OB2.4, if an assignment is project-based then only one assignment for the course shall be planned. The teacher should not conduct two assignments at the end of the semester if two assignments are planned.
- For the course, CIE marks will be based on a scaled-down sum of two tests and other methods of assessment.
- Internal Assessment Test question paper is designed to attain the different levels of Bloom's taxonomy as per the outcome defined for the course.

**Semester-End Examination:**

Theory SEE will be conducted by University as per the scheduled timetable, with common question papers for the course (duration 03 hours).

1. The question paper will have ten questions. Each question is set for 20 marks.
2. There will be 2 questions from each module. Each of the two questions under a module (with a maximum of 3 sub-questions), should have a mix of topics under that module.
3. The students have to answer 5 full questions, selecting one full question from each module.
4. Marks scored shall be proportionally reduced to 50 marks

**B.E COMPUTER SCIENCE & ENGINEERING**  
**OUTCOME BASED EDUCATION (OBE) AND CHOICE BASED CREDIT SYSTEM (CBCS)**  
**SEMESTER - IV**

**UNIVERSAL HUMAN VALUES**

Course Code	SHS02	CIE Marks	50
Teaching Hours/Week (L:T:P)	(1:0:0)	SEE Marks	50
Credits	1	Exam Hours	1.5

**Pre-requisites:** Universal Human Values (conducted during induction programme)

**Course objectives:**

1. Understanding of self-exploration about themselves (human beings), family, society and nature/existence.
2. Appreciating the harmony in the human being, family, society and nature/existence
3. Strengthening holistic perception of co-existence and mutual fulfilment among the four orders of nature.

<b>Module-1</b>	<b>(03 hrs)</b>
-----------------	-----------------

**Understanding Harmony in the Human Being - Harmony in self**

Understanding human being as a co-existence of the sentient 'I' and the material 'Body'; Understanding the needs of Self ('I') and 'Body' - happiness and physical facility; Understanding the Body as an instrument of 'I' (I being the doer, seer and enjoyer); Understanding the characteristics and activities of 'I' and harmony in 'I'.

<b>Module-2</b>	<b>(02 hrs)</b>
-----------------	-----------------

**Understanding Harmony in self and body**

Understanding the harmony of 'I' with the Body: Sanyam and Health, correct appraisal of Physical needs, meaning of Prosperity in detail, Include discussions to differentiate between i) Prosperity and accumulation. ii) Ensuring health vs dealing with disease.

<b>Module-3</b>	<b>(03 hrs)</b>
-----------------	-----------------

**Understanding Harmony in the Family - Harmony in Human-Human Relationship**

Understanding values in human - human relationship, meaning of Justice (nine universal values in relationships) and program for its fulfilment to ensure mutual happiness, Trust and Respect as the foundational values of relationship; Understanding the meaning of Trust, Difference between intention and competence; Understanding the meaning of Respect, Difference between respect and differentiation; the other salient values in relationship.

<b>Module-4</b>	<b>(02 hrs)</b>
-----------------	-----------------

**Understanding Harmony in Society and Nature**

Understanding the harmony in the society (society being an extension of family)- Resolution, Prosperity, fearlessness (trust) and co-existence as comprehensive Human Goals. Understanding the harmony in the Nature; Interconnectedness and mutual fulfilment among the four orders of nature-recyclability and self-regulation in nature.

<b>Module-5</b>	<b>(03 hrs)</b>
-----------------	-----------------

**Understanding Harmony in all levels of Existence**

Understanding Existence as Co-existence of mutually interacting units in all-pervasive space; Holistic perception of harmony at all levels of existence. Include discussions on-human being as cause of imbalance in nature (film "Home" can be used), pollution, depletion of resources and role of technology etc.

**Course Outcomes:**

On successful completion of the course, the students will be able to

1. Become more aware of themselves, and their surroundings (family, society, nature)
2. Become more responsible in life, and value human relationships and human society
3. Have better critical ability in handling problems and in finding sustainable solutions

**Mapping of COs with POs:**

POs COs	<b>1</b>	<b>2</b>	<b>3</b>	<b>4</b>	<b>5</b>	<b>6</b>	<b>7</b>	<b>8</b>	<b>9</b>	<b>10</b>	<b>11</b>	<b>12</b>
CO1						1		3				
CO2						1		3				
CO3						1		3				
Overall 1 level						<b>1</b>		<b>3</b>				

**Evaluation Pattern:**

Two Tests of 25 marks each and 45 minutes duration

SEE for 50 marks and examination duration is 90 minutes

Description	Schedule	Duration (min)	Conducted for	Reduced to
Test-1	7 <sup>th</sup> Week	45	25 marks	25 marks
Test-2	14 <sup>th</sup> Week	45	25 marks	25 marks
CIE			50 marks	50 marks
SEE		90	50 marks	50 marks
<b>Total</b>			<b>100 marks</b>	<b>100 marks</b>

**Question Paper Pattern**

**CIE:** CIE pattern may be hybrid type with MCQs and descriptive questions.

- 10 Marks MCQs
- 3 descriptive questions of 5 marks each
- All the questions are compulsory

**SEE:** SEE pattern may also be hybrid type with MCQs and descriptive questions.

- 20 Marks MCQs
- 1 descriptive question of 10 marks from each of the units (total 3 questions)  
or  
2 questions of 5 marks from each of the units (total 6 questions)
  - All the questions are compulsory

**B.E COMPUTER SCIENCE & ENGINEERING**  
**Outcome Based Education (OBE) and Choice Based Credit System (CBCS)**  
**SEMESTER – IV**

**JAVA SCRIPT**

Course Code	S4CSA01	CIE Marks	50 Marks
Teaching Hours/Week (L:T:P)	(0:0:2)	SEE Marks	50 Marks
Credits	01	Exam Hours	1.5

**Course objectives:**

1. Implement java script programs to understand core concepts and object-oriented programming.
2. Implement standalone programs using Functions, and rollovers.
3. Develop programs on Java script for building smarter forms.
4. Develop programs on Java script for handling events.

Sl. No.	Experiments
1	Design and develop Real-time applications in JavaScript using <ul style="list-style-type: none"> <li>• Control structures</li> <li>• Error handling</li> </ul>
2	Design and develop Real-time applications in JavaScript using <ul style="list-style-type: none"> <li>• Functions</li> <li>• Recursion</li> </ul>
3	Design and develop Real-time applications in JavaScript using <ul style="list-style-type: none"> <li>• Arrays</li> <li>• Iterables</li> </ul>
4	Design and develop Real-time applications in JavaScript using <ul style="list-style-type: none"> <li>• Class and Objects</li> <li>• Object Oriented Programming</li> </ul>
5	Design and develop Real-time applications in JavaScript using <ul style="list-style-type: none"> <li>• Constructors</li> <li>• Strings</li> </ul>
6	Design and develop Real-time applications for Handling Events. <ul style="list-style-type: none"> <li>• Event handling</li> <li>• Event delegation</li> </ul>
7	Design and develop Real-time applications for Handling Events. <ul style="list-style-type: none"> <li>• Forms</li> <li>• Dynamic web page creation</li> </ul>

**Course outcomes:**

On successful completion of this course, students will be able to:

1. Design and develop applications of Object-oriented programming concepts using Core Java script.
2. Design and develop applications using Java script rollovers and functions.
3. Design and develop applications for interacting with users.
4. Design and develop smarter forms through efficient event handling mechanism.

**B.E COMPUTER SCIENCE & ENGINEERING**  
**Outcome Based Education (OBE) and Choice Based Credit System (CBCS)**  
**SEMESTER – IV**

**ADVANCED DATA STRUCTURES**

Course Code	S4CSA02	CIE Marks	50
Teaching Hours/Week (L:T:P)	(0:0:2)	SEE Marks	50
Credits	1	Exam Hours	1.5

**Course objectives:** By the end of this course, the student will:

1. Understand the abstract data types such as List and Vector.
2. Understand the variety of ways that linearly ordered data can be stored, accessed, and manipulated using Hash tables.
3. Explore various sorting algorithms.
4. Understand concepts of Heaps and Binomial Queues and Tree data structures.

Sl. no.	Experiments
1	Develop a program to implement Stack of strings using vectors from STL.
2	Develop a program to implement an Ordinary Queue and Circular Queue using Lists in STL. (Any one to be asked in Examination)
3	Develop a program to store and add two polynomials using lists in STL.
4	Develop a program to merge two unordered Vectors/Lists in STL into a ordered(sorted) Vector/List without using built in functions for sorting.
5	Develop a program to implement Separate Chaining hash table along with rehashing to store a set of integers for a table of prime size.
6	Develop a program to implement Linear Probing and Quadratic Probing along with rehashing to store a set of integers for a table of prime size. (Any one to be asked in Examination)
7	Develop a program to implement Double hashing hash table along with rehashing to store a set of integers for a table of prime size.
8	Develop a program to implement a Binary Heap as a maximum Priority Queue to store a set of strings.
9	Develop a program to implement a Binomial Queue as a minimum Priority Queue to store a set of integers.
10	Develop a program to implement Shell Sort to sort a set of given strings in descending order.
11	Develop a program to implement Quick Sort using median of three as a pivot to sort a set of integers in ascending order.
12	Develop a program to implement a B-Tree of order M to perform insert, display and search operations.
13	Develop a program to implement Red-Black trees over a set of integers to perform insert, display and search operations.

**Note: All the programs are to be implemented using C/C++**

**Course Outcome:**

On successful completion of this course, students will be able to:

1. Identify how C++ standard template library is used to implement ADT.
2. Understand and implement various data structures like hash tables and heaps.
3. Develop solutions to the Sorting algorithms using STL library.
4. Implement self-balancing tree data structures such as B-Trees and Red Black Trees.

**Conduct of Practical Examination:**

- All laboratory experiments are to be included for practical examination.
- Breakup of marks and the instructions printed on the cover page of answer script to be strictly adhered by the examiners.
- Students can pick one experiment from the questions lot prepared by the examiners.
- Change of experiment is allowed only once and 20% Marks is to be deducted.

**B.E. COMPUTER SCIENCE & ENGINEERING**  
**Outcome Based Education (OBE) and Choice Based Credit System (CBCS)**  
**SEMESTER – IV**

**CUDA PROGRAMMING**

Course Code	S4CSA03	CIE Marks	50
Teaching Hours/Week (L:T:P)	(0:0:2)	SEE Marks	50
Credits	1	Exam Hours	1.5

**Course objectives:**

1. To program using Message Passing Paradigm
2. To program using shared address space
3. To program for GPUs using CUDA

Sl. no.	<b>Experiments</b>
<b>Message Passing Interface</b>	
1	Establish communication between nodes.
2	Receive selective messages.
4	Factorial of a huge number.
5	Sorting
6	Vector operation
7	Matrix operation
<b>OpenMP</b>	
1	One dimensional array
2	Two dimensional array
3	Synchronization among threads
4	Scheduling of threads
5	Workload sharing
<b>CUDA</b>	
1	Basic image processing operation
2	Text analysis
3	One dimensional array
4	Two dimensional array
5	Query device properties and handling errors

**Course outcomes:**

On successful completion of this course, students will be able to:

1. To implement and debug program using Message Passing Interface (MPI)
2. To implement and debug program using OpenMP to use shared address space
3. To implement and debug programs on GPU

**Conduct of Practical Examination:**

- All laboratory experiments are to be included for practical examination.
- Breakup of marks and the instructions printed on the cover page of answer script to be strictly adhered by the examiners.
- Students can pick one experiment from the questions lot prepared by the examiners.
- Change of experiment is allowed only once and 20% Marks is to be deducted.

**B.E COMPUTER SCIENCE & ENGINEERING**  
**Outcome Based Education (OBE) and Choice Based Credit System (CBCS)**  
**SEMESTER – IV**

**R PROGRAMMING**

Course Code	S4CSA04	CIE Marks	50
Teaching Hours/Week (L:T:P)	(0:0:2)	SEE Marks	50
Credits	1	Exam Hours	1.5

**Course objectives:**

1. Learn the basic programming concepts of R
2. Develop coding strategies for Data handling, sampling, pre processing and boot strapping using R
3. Use the logics with object oriented programming concepts to compute the program using R
4. Perform data analysis

Sl. no.	Experiments
1	Installations and Environment Set up, Introduction to R basics,R usage & applications ( usecases)
2	R as calculator, Data Vectors, Built in Commands
3	Operations with Matrices, Data Handling, Strings etc
4	Sampling , Probabilities of selection of samples, etc
5	Random Sampling, Estimations etc
6	BootStrap methodology
7	Object Oriented Programming using R
8	Data Handling - Importing data, Accessing data, Exploring data
9	Data Visualization using R
10	Data Pre processing using R
11	Data Manipulation using R
12	Statistical Analysis – Simple use cases
13	Statistical Analysis – Advanced usecases

**Course outcomes:**

On successful completion of this course, students will be able to:

1. To **Understand , Learn and Apply** the basic programming concepts of R
2. To **Synthesize** Data handling, sampling, pre processing and boot strapping using R
3. To **Develop** the logics with object oriented programming concepts using R
4. To **Compute and Analyse** statistical data using R

**Conduct of Practical Examination:**

- All laboratory experiments are to be included for practical examination.
- Breakup of marks and the instructions printed on the cover page of answer script to be strictly adhered by the examiners.
- Students can pick one experiment from the questions lot prepared by the examiners.
- Change of experiment is allowed only once and 20% Marks is to be deducted.
